This is a free eBook. Paperback copies can be purchased at www.tamarehouse.com

This Book is inspired by the likes of the following individuals, who have helped me, in one way or another, to raise my awareness and align with “truth”, however difficult the cognitive dissonance may have been.

(in no particular order)

Dr Malachi Z. York, Johnny Eugene Brown, Atenubi Taharakhti, Ra Un Nefer Amen, Brother Sanchez, Martin Kenny, Mark Sargent, Santos Bonnaci, Itzhak Bentov, Sheikh Anta Diop, John Henrik Clarke, Dr. Phil Valentine, F. Amadeo Giannini

This Book is dedicated to

Precursor

“The old, the traditional and established, is always the sacred cow feeding on the clover of assumption in each time’s pasture of cultivated and acceptable conceptional values. Therefore, it must be preserved at any cost. The new and unknown is always fearful to the majority. The fears attending normal pursuits within an established social pattern may be dispelled, or at least modified, by one means or another; but the fear of that which is new and unknown, and which is beyond the conditions and afflictions of the ordered pattern, must disturb the conforming majority. Routine is the order of the pattern; and though it is at times fatiguing, it embraces a measure of security symbolic of safety. Hence the new and the unknown must be in some measure resented, and must always fight for a hearing”.

– F. Amadeo Giannini

Brief Introduction

The two-part title of this book is exactly as they imply: Nature Science and Flat Plane Cosmology. Indeed, this is a science book. Specifically, the Science of Nature as a whole. In fact, it is about the science of our universe as a whole. Science is the study of reality and ought to be an ongoing course of search, research, discovery and rediscovery. More often than not, a true nature scientist is by nature forward thinking and forward moving and is not emotionally tied to the mundane and secular ideologies of life and earthly existence. A true nature scientist will always find himself or herself challenging old paradigms and old scientific ideas and concepts, whether they intend to or not. Because, a true nature scientist must be willing to learn, unlearn and relearn. This is paramount, especially with the idea that our universe exists as a hologram of many possibilities. The same holds true for the reader, and listener of the reader; they must be willing to learn, unlearn and relearn. This book is about raising awareness of our world and our universe, in such ways that challenges literally everything that we have been lead to believe about life and existence, to this day.

When reading and studying the contents of this book, if cognitive dissonance is encountered and engaged, by the reader, then this writer is doing a great job. If not, then perhaps, the reader is not ready to climb the ladder and look over the wall. Not to suggest that the grass is greener on the other side; but rather, that the vastness of the other side, the unknown, is as much mysterious and intriguing as it is plentiful in knowledge, understanding, inspiration and revelation.

In this science book, each section is numbered and starts with “Listen to Reason” and concludes with “Let it be remembered always”. This is part of the writer’s adopted neologism which is explained at the very early stages of this writing.

The main purpose of this work, is to engage the mind to reveal what it already knows about the nature and science of our universe. There is nothing new that this book can teach. It can only remind us about what we already know about our cosmology. Ultimately, and collectively, we are all part of The All. Thus, we are essentially part of the creative force that brought us to this point. There is no separation between *creator* and *created*. It is all one. Let it be remembered always!

– *Nebu Ka Ma’at*

PART ONE – Nature Science

Introduction to the Nature of Nature

Who or What is Supreme-Being?

1. Listen to Reason! In order to set the correct context and narrative of this writing and for understanding what is meant by Supreme-being, it is important that we emphasise what is meant by the phrase **“Nature of Nature”**. If we take into account an animal such as a lion, we can very easily acknowledge that the lion has a natural-law about itself. The natural-law of the lion is equal to its natural-nature. And likewise, the natural-nature of the lion is equal to its natural-purpose. Therefore, we have the nature of the lion. The same principle applies when we take into account human beings, birds, fishes, or trees. By virtue of their existence suggests they all have a natural-nature. The nature of human beings. The nature of birds. The nature of fishes. The nature of trees, etc. A pre-determined way of being in accordance with their law, nature and purpose; thus, law=nature=purpose. Therefore, nature as a whole (including all persons, all places and all things) must also have a nature about itself. To summarise this truth, we use the phrase the **“Nature of Nature”**. Let it be remembered always!

2. Listen to Reason! In this writing, we will also use the phrase **“Absolute-Nature”**. The phrase **“Absolute-Nature”** is all existence in its absoluteness. Absolute-Nature is inclusive of all persons, all places and all things. Absolute-Nature is the inclusion of all forms of life – spiritual life, mental life and the obvious physical life. Everything in nature is alive and is conscious to one degree or another. There is nothing that can exist outside of Absolute-Nature. Indeed, Absolute-Nature includes all universe orbs too. Meaning, that which

general science calls planets, moons, suns, stars, galaxies and universes. Let it be remembered always!

3. Listen to Reason! The Nature of Nature are the **Laws** and **Principles, Cycles** and **Seasons** of Absolute-Nature as a whole. This includes the dynamics of **Growth** and **Order, Reciprocation** and **Balance**. Every person, place and thing within Absolute-Nature are automatically and naturally grown into existence in adherence with the laws, principles, cycles, seasons and also dynamic in terms of growth, order, reciprocation and balance. No person, place or thing, can exist within Absolute-Nature otherwise. Absolute-Nature is all encompassing and all persons, places and things are subject to the Laws of Nature, the Nature of Nature and the Purpose of Nature. Let it be remembered always!

4. Listen to Reason! The phrase **“Listen to Reason”**, is an invitation to the reader (and also the listener of the reader) to listen to their inner voice. It is also an invitation for the reader (and the listener) to listen to the inner voice of this writer: Nebu Ka Ma’at. Reason is Source-Energy. As human beings, we all have the capacity to listen to our inner voice. All our individual inner voices are centrally connected to the same source, called herein this writing Source-Energy. From an etymological and word composite perspective, the word reason is “re/ra” and “sun” = ray of the sun. The suns in nature are literally relay stations of information transducing outward from Source or Source-Energy. So, when human beings use reason (also called “sound right reason”, which we will elaborate on later in this writing), we are literally in conversation with the sun. The sun is the sovereign being within our local vicinity. The sovereign being within any given vicinity is best evidenced as the most potent and powerful being of that vicinity. And the most powerful being must be most powerful in all aspects, including: information (inspiration and revelation) in the form of energy and light, hence, the rays of the sun. In our most local vicinity of universe orbs, also called luminaries, the sun is the most powerful orb/luminary and is the best source of truth. Later in this writing, the author will make clear distinctions between ‘reasoning’ and ‘thinking’. It will be made very clear that ‘reasoning’ is a much more profound avenue for arriving at truth than ‘thinking’. Therefore, ‘reason’ is a much more profound faculty for arriving at truth than ‘thought’. Let it be remembered always!

5. Listen to Reason! The phrase **“Let it be remembered always”**, is an acknowledgement of the time cycle that we, those of us living today, are currently experiencing. That is, the liberation cycle. Or, the Libra cycle. The word Libra is short for Liberation. Let it be remembered always – is the acronym for L.i.b.r.a. By Liberation, we are talking about

freedom of mind. Freedom of the mental. Human beings have been mentally asleep for the past 6000 years, by natural process, by cycle and by season. And the time has come by natural process, cycle and season, for mental resurrection and awakening of humanity, so to speak. Hence, the liberation cycle. To keep this concept simple, let us consider 4 very small nature cycles and seasons of 6000 years each. One complete revolution is therefore approximately 24,000 years, known as one cosmic day, similar to that of our localised 24 hours of a day clock. The cycles, in this consideration, are called:

- a. spring cycle (or silver age)
- b. summer cycle (or golden age)
- c. autumn cycle (or iron age)
- d. winter cycle (or bronze age).

It is the understanding of many universe scientists that the last 6000 years, the bronze age, was a winter cycle where humans were mentally descending and were in decline of conditions, morals, qualities, standards and abilities. Now that we are entering the silver age, or spring cycle, we are therefore ascending and are in recline of conditions, morals, qualities, standards and abilities. On a much larger 36-Million-year cycle (to be discussed later) we are also currently in transition from a 3-Million-year age of Pisces cycle into a 3-Million-year age of Libra cycle. In other words, our local universe is part of a multiverse of many universes, and there are multiple cycles within cycles. So, we are not just talking about a local phase-shift in consciousness. This is a multiverse phase-shift in consciousness that is taking place. Let it be remembered always!

6. Listen to Reason! The **Supreme-Being** is **All-Space**, **All-Matter** and **All-Time**; all persons, all places and all things; past, present and future, infinite in all directions, called **Infinite-Almighty-Eternal Absolute-Nature**; or **Infinite-Space**, **Almighty-Matter** and **Eternal-Time**, which is Absolute-Nature. The Nature of Nature, therefore, deals with the origins and endings of all persons, all places and all things; past, present and future; covering All-Space, All-Matter and All-Time (aka SMaT) – The Supreme-Being. The Law of “x” is the Nature of “x” is the Purpose of “x”. Let it be remembered always!

Who is Nebu Ka Ma’at?

7. Listen to Reason! Originally ordained as **Nebu Ka Ma’at** by Elders of the **Ancient Egyptian Order** (“AEO”), this writer (herein as “me”, “myself”, “i”, “my”) has taken on the

“law”, “nature” and “purpose” of pre-destined mandates whilst on earth. It is written in the annals of the AEO that every initiate accepted is given an authentic name or title. At initiation, the student is given their name or title as a reflection of their ordained-sovereignty, birthright, nobility and royalty. That is to say, the name/title reflects the individual’s “law”, “nature” and “purpose”. The student is also given a definition of that name/title and is told that the definition given is a lessor definition. The course of life and self-study that the student takes-on from thereon is to raise and broaden their awareness such that they internally-realise the greater definition of their name/title. The original (lessor) meaning of Nebu Ka Ma’at that was given to me, upon initiation, is ***Golden Spirit of Justice, Order and that which is Straight, Right and Exact***. For those of you reading this who are initiates of any particular esoteric or spiritual order, do take a moment here and now to remind yourself of your name/title and the given meaning. Let it be remembered always!

8. Listen to Reason! At the dawn of the year 2016 [$2+1+6=9$] a more authentic meaning of Nebu Ka Ma’at came to my realisation: ***Golden Ray of Justice, Liberation and Balance***. It is my intent to live within this context – as a channel for the Golden Rays of our local sun as it emanates and radiates the necessary information for liberation at these points in time; the dawn of the new cycle and season with *Golden Rays of Justice, Liberation and Balance*. According to the Nine-Ball¹ 1971 [$1+9+7+1=18$; $1+8=9$] it is explained that Absolute-Nature as a whole is currently at a universal turning-point from Evolution cycles toward Revolution cycles; also called ‘Moonset and Sunrise in the Nature of Nature’, by Ethiopian Nature Scientists. What does this mean? In short, the last 6000 years (the winter cycle/bronze age) is called symbolically the Moon-Cycle by Nature Scientists and signified the rock-bottom point of the Existence-Circle also called the Circle of Space, Matter and Time (aka SMaT Circle of Universe-Order). And, this 6000-Year period ended on 5th February 1962 [$1+9+6+2=18$; $1+8=9$], and thusly marked the dawn of the next 6000 years (the spring cycle/silver age) called the Sun-Cycle by Nature Scientists. Let it be remembered and known always that the Moon-Cycle and Sun-Cycle are opposites by Nature. The Moon-Cycle is the last 6000 years of the 18-Million-year Evolution-Cycle of Absolute-Nature, whereas the Sun-Cycle is the first 6000 years of the 18-Million-year Revolution-Cycle of Absolute-Nature, hence the phrase “Moonset and Sunrise in the Nature of Nature”. Note also that the year 2016 is exactly 54 years from 1962 [$5+4=9$]; and the new awakening of Nebu Ka Ma’at took

¹ The Nine-Ball, Count 1, 1971 by Wu Nupu, Asu Nupu and Naba Nupu

place on the 5th February 2016 in line with the planetary alignment that took place on 5th February 1962 that marked the end of the 18-Million-year Evolution-Cycle and the dawn of the 18-Million-year Revolution-Cycle. More on these larger cycles later. Let it be remembered always!

9. Listen to Reason! Furthermore, the Moon-Cycle is the process of Absolute-Nature in its last stages of decline, by way of the cyclical Laws of Nature and by Reason. That is to say, Absolute-Nature went through a downward or Descending-Reason process of: decline (waning) in conditions, morals, qualities, standards and abilities of persons, places and things over the 18-Million-year Evolution-Cycle. In contrast, the Sun-Cycle is the process of Absolute-Nature in its early stages of recline, by way of cyclical Laws of Nature and by Reason. That is to say, Absolute-Nature is now beginning to go upward in its Ascending-Reason Process of: recline (waxing) in conditions, morals, qualities, standards and abilities of persons, places and things over the forthcoming 18-Million-year Revolution-Cycle. These are natural processes that occur naturally, by Nature and by Reason. Let it be remembered always!

10. Listen to Reason! To close this section: Nebu Ka Ma'at is the personam or being that I am growing and developing into, as this is my pre-ordained-birthright, sovereignty, nobility and royalty – a scribe and notary of Nature-Science Philosophy. The question is: what is your destined life path, and are you living into it? If not, then consider the possibility that you are living in deception, or living your life in vain. In the context of my personal law, nature and purpose; my doctrine is therefore that of Nebu Ka Ma'at; that of the *Golden Ray of Justice, Liberation and Balance*. Let it be remembered always!

Inspiration and Revelation in the Nature of Nature

11. Listen to Reason! The introductory books known as 'Introduction to the Nature of Nature' parts one and two (herein as "**ITNON**") by Afroo Oonoo, gives the reader a series of very profound explanations of the following topics, which I only intend to draw from, and also expound upon, where it concerns Flat Plane Cosmology. Topics within the ITNON books include:

- a. Space, Matter and Time (or SMaT Circle of Universe Order)
- b. Who or What is the Creator, God and Mind?
- c. Brain-Noots, Reason and Spirit-Beings

d. The Cycles and Seasons of Absolute-Nature

This writing that you are reading here and now is indeed inspired by the latter. However, this writer is not biased to any specific texts or groups of writing, teaching, doctrine, ideology or dogma. My research and investigation involves studying many different sources of information, including creation stories from many different cultural and biological groups of people. As a researcher and scribe for over 15 years, I have developed a natural ability to cross-reference information from very broad contrasts and perspectives and to find what is consistent and coherent in all of them thus arriving at a consensus. This is known as the art and science of syncretism. Later, the process of syncretism will be looked at from a very objectified perspective. Syncretism is the art and science of the amalgamation or attempted amalgamation of different religions, cultures, or schools of thought... to find the common ground in all. There is truth in everything. But it takes a skilled researcher to syncretise his findings in a non-biased way. Let it be remembered always!

12. Listen to Reason! The ITNON books, parts one and two both define the nature of **Spirit-Beings**. By nature, Spirit-Beings perform five main functions. They Inspire and Reveal information to human beings, and they are also Organisers, Programmers and Controllers of persons, places and things. Put another way, they are helpers within nature. They serve all aspects of nature. But what exactly are Spirit-Beings? They are entities that are created by universe orbs, such as what we know (scientifically speaking) as planets, moons and suns. We will elaborate more on the nature of universe orbs in part two of this book: 'Introduction to Flat Plane Cosmology'. Essentially, Spirit-Beings are conscious and conscientious gas formulas, that are produced by universe orbs. Let it be remembered always!

13. Listen to Reason! All universe orbs are living entities; whether we perceive them as planets, moons or suns. And as living entities they all have central brain cores. Through brain concentration of their central brain cores, these universe orbs produce Spirit-Beings as helpers in the order of creation, sustenance and destruction; or, life, renewal and death; or, growth, balance and decay. Whilst Spirit-Beings perform the five main functions expressed above, here, we are looking into their capacity to inspire and also to reveal knowledge (truth). Let it be remembered always!

14. Listen to Reason! Human beings are inspired by Spirit-Beings every day. Spirit-Beings also reveal information to human beings every day. Information is inspired and revealed by way of thoughts that influence the minds of human beings. In other words, thoughts and thought patterns are the automatic as well as intentional workings of Spirit-Beings. The

information within the ITNON books were revealed and inspired by Spirit-Beings of the highest order and ranking the highest in those who are also organisers, programmers and controllers of what is happening on earth today. In the same way, I, Nebu Ka Ma'at is a channel for inspirations and revelations by Spirit-Beings, during this awakening cycle, known as the Libra cycle. Let it be remembered always!

15. Listen to Reason! Historical knowledge about our earth and our universe can be found in the oral traditions of many ancient African, Hindu and Asian groups, tribes and communities. Of all the hundreds of millions of dollars that Europeans and people of the West spend every year on exploration and study of the ancient world and their cosmologies... a vast amount of that money is spent by scientists on travels and time spent with African, Hindu and Asian groups and communities. Why is this? Bear in mind that, often, these groups (such as the **Dogons of Mali West Africa**) are labelled as primitive by scientists. They are labelled as people who are backwards and having very little knowledge of the science of the earth and the cosmology of the universe in general. But this writer begs to differ. The Dogons are a very interesting group of people; those of the ancient past and these of today. And they, the Dogons, have a very interesting perspective on the origins of man and the universe. For instance, and for a start, their narratives (like many other African oral traditions) does not agree with the 'all humans originate in Africa' theory. The Dogons are specific with the narrative as to where they came from. They say they are descendants of Pygmies that originated in the lands of the north. Let it be remembered always!

16. Listen to Reason! The Dogons are very specific about their origins. They are descendants of the **Tellem Pygmies** (or *small red people*) who in turn orally narrate that they came from lands that they describe as being in the North; as in, the North Pole (not North of Africa!). Interestingly, this is where we get the fairy-tale of Santa and his elves. Midgets from the North Pole bearing gifts. This is a plagiarized account of the fact that short people, known today as the African Pygmy (including all other biological groups of humans) originated at the centre of our earth, geographically speaking. Let it be remembered always!

17. Listen to Reason! Western explorers, astronomers and archaeologists would often attribute many of the mysteries and wonders of the world to aliens from outer space, or from giants of an ancient world; such as, the building of the pyramids of Giza, Egypt, and many other wonders of the world. This is because they do not want to admit to the genius and advanced knowledge that small people of ancient Africans, Hindus and Asians hold, and

have held for thousands of years. Indeed, ancient knowledge is being revealed and inspired by our own humans and not from space aliens. This includes the advanced information conveyed in books one and two of ITNON. Let it be remembered always!

18. Listen to Reason! Ancient cultures of African, Hindu and Asian biological groups did not segment and chop up their studies as we do today. They studied nature as a whole and holistically... taking into account the principles of: the law, nature and purpose as well as the growth, order, reciprocation and balance of Absolute-Nature. Today, we have subjects such as mathematics, sciences, languages, geography, astronomy, religions and so forth. But the people of ancient times only had one subject, and that was the study of the unity of Absolute-Nature called Nature-Science. Let it be remembered always!

19. Listen to Reason! Our ancient ancestors did not believe in space aliens as we have been led to believe by Western writes of ancient antiquity. They did not learn anything from any space aliens. Our ancestors learnt what they know from each other. They learnt everything they know today by the passing down of knowledge, via oral traditions over hundreds of thousands of years, of the on-going observations of Absolute-Nature and its components. The Dogons did not believe in space aliens. They understood that it was impossible for life-forms of other worlds to travel across space-time and end up here. In the same way that it is impossible for humans to leave this local environment and go into so-called outer-space. The Van Allen belts directly outside our earth's atmosphere make this an impossibility due to their inescapable, unavoidable and damaging radiation. To express this impossibility another way. Humans are a product of the elements of our immediate environment. And likewise, all life-forms on earth are a product of the unique circumstances and conditions of our local environment. Therefore, should humans somehow develop the capability to leave this environment, we would also be leaving behind the very unique circumstance and conditions that sustains us. Therefore, we would die immediately upon leaving the atmosphere. Let it be remembered always!

20. Listen to Reason! The only reality humans are familiar with is the one that we are familiar with, both past and present. When it comes to studying and comprehending our world and its components, information is revealed to us from each other as we share what we know with our neighbour. We are inspired by ourselves. We are also inspired by the Spirit-Beings of our environment. The Spirit-Beings of our world also reveal information to us when the conditions are right for us to comprehend and make use of new knowledge and information. Nature Science is the study of Absolute-Nature including all its persons,

places and things... and its components called space, matter, time including Mind and Reason. Nature Science is also the study of the magical and magnetic principles of Brain-Noots which are the primary movers in matter, whereas matter is the primary mover in nature. Let it be remembered always!

21. Listen to Reason! What scientists refer to as the reverse-engineering of alien technology, is really the reverse-engineering of ancient technology. Our ancient ancestors were advanced in the sciences of nature; hence the phrase Nature-Science. What we have today in the form of mobile communication, radio, television, automobiles, aircraft and so forth... is not new technology at all. These forms of technology have always existed in one form or another. The image ahead shows an ancient Egyptian artefact depicting transportation machines such as helicopters, aircraft, hovercrafts and boats, just as we have today. This carving was found in the temple of Abydos, Egypt, by Dr. Ruth Hove. Yet, scientists would rather have us believe that advanced ancient knowledge and technology came from aliens and mythological giants from other worlds, than give credit to where it is properly due. Needless to say, the writings on wall tell a different story. To summarise, what we have today as advanced technology is the result of studying ancient advanced technology, sciences and writings – stolen during times of invasion! Let it be remembered always!

Image 1: Ancient Egyptian carving showing evident depictions of ancient transportation machines.

22. Listen to Reason! **Cheikh Anta Diop** was a Nature Scientist of the Aethiopian biological groups. He was born of the **Serer Noon** tribe of the people of Dakar, Senegal, West Africa. He was also a member of the **Order of the Upright Stone**². The Serer Noon people are record keepers. They were entrusted with knowledge and information handed down to them by the **Semu**; priests of the **Temple of Ta** (not to be confused with *Ptah* of ancient Egypt). The Semu of the Temple of Ta goes back 6000 years and were record keepers of what is known today as **Noone-Science**, which is a Nature-Science Philosophy, as conveyed in the ITNON books parts one and two. The Semu were masters of the universe, so to speak. Meaning, they had mastery of knowledge pertaining to the components of our universe; space, matter, time and the hierarchy of ether in its manifestation of life from top-downward and also from in-outward. Cheikh Anta Diop, by virtue of his scientific and historian acumen, was naturally qualified by nature to convey some of what was passed down to the Serer Noon people, to the African diaspora. What was passed to Diop were very specific narratives written in the **Noni language**, which he translated into French, and later other entrusted parties translated some of them into English; which we know today as the ITNON (Introduction to the Nature of Nature) books, by Afroo Oonoo. Let it be remembered always!

Picture 1: Cheikh Anta Diop

23. Listen to Reason! One of the most culturally, scientifically and spiritually advanced Kingdoms of Africa was known as Kashta, or the **Kingdom of Kashta**. However, the word Africa did not exist to those people. Kashta (not to be confused with King Kashta of the Kushite Dynasty in ancient Nubia) encompassed a vast area of what we see today as West and Central Africa. In the writings of Herodotus, the Kashta regions were labelled as Lower Aethiopia (West Africa of today) and Upper Aethiopia (Central Africa of today). Note: Ancient Aethiopia is not to be confused with today's Ethiopia of East Africa. In other writings and ancient maps of the Aethiopia regions, Aethiopia was labelled as **Nigritia**, meaning: *land of the blacks*. The two images ahead show ancient maps of Africa, proving that Nigritia covers Upper and Lower Aethiopia. It was the people of Nigritia (Kashta) that had handed

² Quoted from Atenubi Taharakhti: Sheikh Anta Diop was a Serer Noon

13

Noon people, are two of very few people of the original Aethiopian biological groups, that kept their oral traditions secret and sacred, and specifically avoided becoming Islamised or Christianised. Hence, these two groups of people are, to this day, very well in touch with and are versed in their oral narratives and traditions going back thousands of years. What is more important to note is that both groups of people were taught what they knew from the Tellem Pygmies, who say they themselves originated at the North Pole before spreading to other parts of the Atlantean world. Let it be remembered always!

25. Listen to Reason! The Pygmies are the oldest known humans on earth today. They are the oldest genetic haplogroup of humans, known as haplogroup A00, going back more than 337,000 years, where many other haplotypes descended (i.e., biological groups, commonly called *races* today). They are the teachers of humanity. Their traditions include knowledge of the origins and ending of all persons, places and things. Their teachings are always central to the Creator and never excludes the Creator. Their spiritual systems of thought are the oldest known to humanity. Let it be remembered always!

Introduction to Nature Science

The SMaT Circle of Universe-Order

26. Listen to Reason! According to the annals of universe science which is also Nature Science, in particular the revelations of ITNON, SPACE is defined as the vacuum of Infinite-Consciousness within which Matter exist. Whereas MATTER is everything and anything that occupies SPACE; including Energy, Brain-Noots, Reason, Mind and Spirit-Beings. And TIME is the Eternal-Keeper and Continuity of SPACE and MATTER. SPACE is masculine in principle and in polarity; in contrast to MATTER which is feminine in principle and in polarity. The vacuum of Infinite-SPACE is, by Nature, perfect in the sense that Space is the unmovable mover. Because, Space has never been moved, can never move nor can ever be moved even if it wanted to move or be moved. Thus, Space is constant and perfect in positivity and within its Nature. Almighty-MATTER is, by Nature, imperfect in the sense that Matter is movable, changeable, alternatable and alterable. Because, Matter is anything and everything that occupy Space; and Matter moves, changes, alternates and alters within Nature, thus Matter is imperfect within Space, yet is perfect in negativity and within its Nature. Eternal-TIME is the keeper and continuity of Infinite-SPACE and Almighty-MATTER. Space and Matter needs Time in order to exist. The three are inseparable and are known as the Triad of SMaT. Absolute-Nature (Supreme-Being) is the Absolute-Triad inclusivity of Infinite-SPACE, Almighty-MATTER and Eternal-TIME, or: Infinite-Almighty-Eternal Absolute-Nature. Let it be remembered always!

27. Listen to Reason! Infinite-Almighty-Eternal Absolute-Nature is the Supreme-Being by Nature and by Reason. The Supreme-Being is Infinite in Space, Almighty in Matter, Eternal in Time and Absolute in Nature. The Supreme-Being exists in the form of cycles and seasons within a 72-Million-year counter-clockwise rotatory construct. This grand construct of cycles and seasons are similar to that of the 12-month yearly system, that humans are more familiar with, with the four seasons of spring, summer, autumn and winter. The Supreme-Being is all inclusive of multiverses. That is to say, Infinite-Almighty-Eternal Absolute-Nature is the collective of countless universes, all of which exist in one formula or another on the big wheel, or big circle, called in the ITNON the SMaT Circle of Universe-Order. Let it be remembered always!

Circle of Space, Matter and Time (SMaT Circle of Universe-Order)

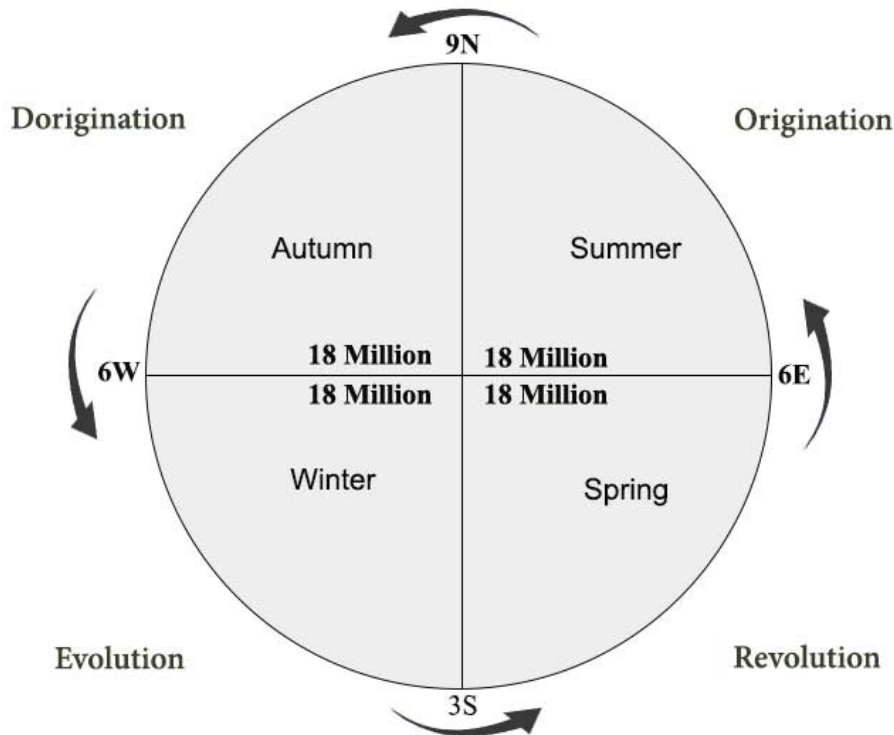

Diagram 1: SMaT Circle of Universe-Order

28. Listen to Reason! The SMaT Circle of Universe Order, which is the existence of the all-inclusive multiverse construct, is divided into four quarters of 18-Million-years each. On the big circle, these 18-Millionn-year periods are the Spring, Summer, Autumn and Winter segments of Infinite-Almighty-Eternal Absolute-Nature – as above so below. Absolute-Nature makes changes, one degree at a time, for better or worse standards, according to the natural conditions of where we are on the SMaT Circle, also called the existence circle. The existence circle rotates counter-clockwise in cycles of 720°s over its 72-Million-year period. Thus, each degree lasts 100,000 years and marks another process of cyclical shifts and transformations of All that Is. Let it be remembered always!

29. Listen to Reason! Within the cycles of the existence circle, exists countless universes of all types, qualities and standards according to the types, qualities and standards of Matter and Brain-Noots meltdown and the Laws of Nature. Each universe is centred to their own toroidal dynamics and expands in and around their own torus fields, or cosmic eggs. These universes exist as living and conscious entities that occurs within the phenomenon known as the big circle of Space-Matter-and-Time (SMaT). One complete Cycle of SMaT lasts for 72-Million-years (according to Nature-Science Philosophy in the ITNON) of which the four

smaller cycles are called: Origination-(Summer), Dorigination-(Autumn), Evolution-(Winter) and Revolution-(Spring). The SMaT Circle of Universe-Order continues and repeats itself for 80 cycles; that is $80 \times 72\text{-Million-years} = 5,760,000,000$ years of universe-order (cosmos), after which the Universe disintegrates into universe-disorder (chaos) for an equal duration of 5,760,000,000 years then regenerates and grows back into universe-order yet again and again and again. The right and necessary conditions for universe growth are: wetness, warmth, darkness, the right material matter, Brain-Noots, Reason, the proper cycle and season, and The Laws of Nature. Then, Brain-Noots Gods and Goddesses of Absolute-Nature act spontaneously³ (automatically). There are 9-pairs of Brain-Noots Gods and Goddesses that exists eternally – during the order-cycle and also the chaos-cycle of Absolute-Nature. Let it be remembered always!

Who or What is the Creator, God and Mind?

30. Listen to Reason! The CREATOR within Absolute-Nature is the infinite workings of Brain-Noots, REASON and Spirit-Beings. The region of their workings are in-between the realms of Space and Matter with the keeper known as Time; this region is like a bridge that synergises these two great opposing existences. Here, both the magical and magnetic as well as positive and negative forces of Space and Matter work together, as Brain-Noots melting down into Matter to produce brains. Let it be remembered always!

31. Listen to Reason! Spirit-Beings in Nature are the etheric Gods and Goddesses in Absolute-Nature. In other words, there is no Creator outside of Infinite-Almighty-Eternal Absolute-Nature; instead, Absolute-Nature is self-grown and consciously produces Gods and Goddesses by REASON and Brain-Concentration of universe orbs. These Gods and Goddesses are thus the helpers within Nature, by REASON; they are the organisers, programmers and controllers of persons, places and things by the Laws of Nature and by way of the Nature of the Cycles and Seasons. Let it be remembered always!

32. Listen to Reason! The active ingredient in Matter is energy, and the magical and magnetic components in Matter are called Brain-Noots, according to the ITNON. Thus, Brain-Noots is the prime-mover in Matter; and Matter is the prime-mover in Nature. When Brain-Noots meltdown into Matter the first thing that is produced is the brain core of whatever is being created and grown at that moment. When the brain core is formed, next

³ ITNON, book two, page 29, #36

is radiated what is known as a torus field; or, the sphere of Mind. In other words, all universe orbs have a torus field of Mind. Similarly, (as above so below) all living beings (including Spirit-Beings and also human beings) have a central brain core that radiates a torus field of Mind. The brain core is the primary seat of consciousness and the Mind is the torus field within which consciousness interprets thought and reason. In turn thought, or what we call thinking, is the intervention of and interaction with Spirit-beings within the Mind. Whereas, Reason is the intervention of and interaction with Source or Source-Energy. Let it be remembered always!

The Torus Fields of Nature

33. Listen to Reason! The torus field is the oldest magnetic structure in existence and without it nothing could exist. In some spiritual disciplines this field is called the **Merkaba**, which we will look at in Part Three of this book. The torus field's toroidal shape is similar to a donut, but rather than having an empty central hole, the topology of the torus folds in upon itself; and all points along its surface converge together into a zero-dimensional point (or black hole) at the centre of which its brain core is located. Brain-Noots are invisible to the naked eye. Yet, Brain-Noots exist within the core of the torus field. What we see as rays of the sun, for instance, is the sight recognition and best evidence of active Brain-Noots melting-down into matter and radiating its torus field. The brain core is actually very small in relation to what we observe as the radius and size of the sun. All living things have a torus field from one magnitude to another. Our local universe is a multidimensional torus field. That is to say, a multidimensional body of four torus fields. Within our universe lays the cosmology of these four torus fields. Within our universe, also, are a large multiplicity of lifeforms all having their own individual torus fields. Let it be remembered always!

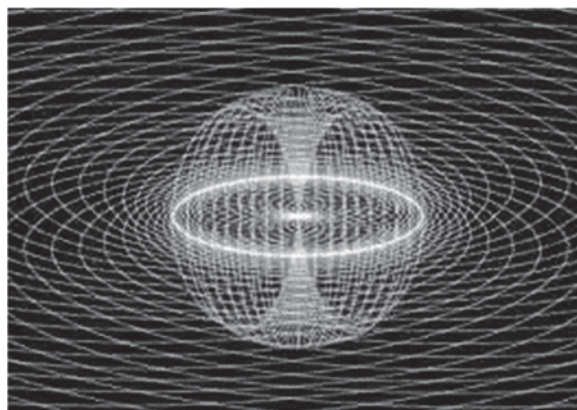

Diagram 2: General depiction of a torus field. Notice the flat plane at the cross section

34. Listen to Reason! The torus field is a phenomenon that has been known about for many thousands of years. Different cultures across wide spans of time refer to the fields as the **cosmic egg**, by virtue of its shape. But more appropriately named cosmic egg since all life is born out of an egg. So, our particular universe lives within a four dimensional cosmic egg – a four dimensional torus field. The torus fields of our earth's realms are labelled by NASA (National Aeronautics and Space Administration) as the four Van Allen belts. Let it be remembered always!

35. Listen to Reason! It is not just the brain core of lifeforms that radiates a torus field. Taking the human being for instance, quite literally, every organ radiates a torus field. The heart, which is considered the posterity of the body's etheric brain, also radiate a significant torus field as the diagram ahead depicts. Let it be remembered always!

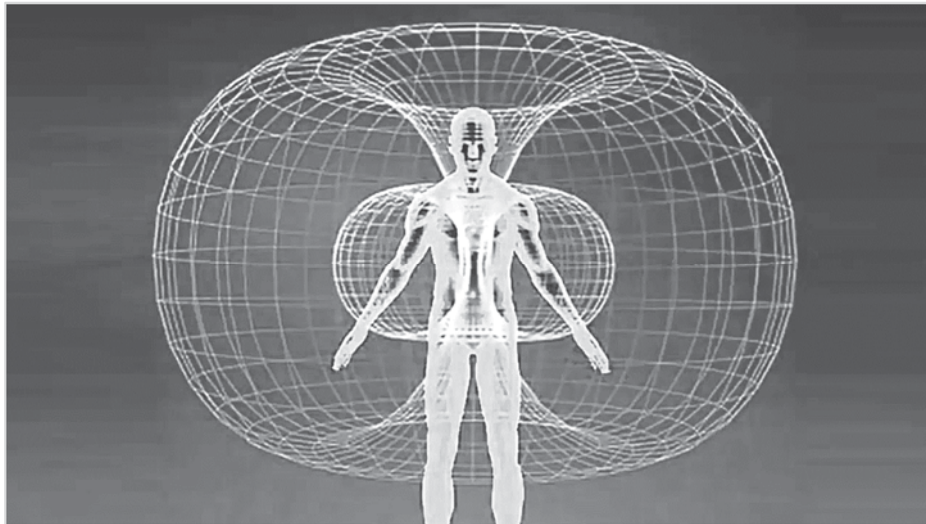

Diagram 3: Torus field radiated from the heart.

36. Listen to Reason! Consciousness has a geometric nature. The torus field of living beings is the spherical embodiment of consciousness. Consciousness radiates outward in a donut shape and converges back on itself; thus refreshes itself automatically and naturally. One way of looking at this outward and inward flow of energy is that consciousness is self-reflective and self-reflexive. Let it be remembered always!

Brain-Noots, Reason and Spirit-Beings

37. Listen to Reason! Brain-Noots are magical and magnetic components within Matter that when melted-down (i.e., magically transform into Matter) forms brains. In other words, Brain-Noots are the first and prime-mover in Matter. Every living organism within Nature has a central-brain; from the Central-Sun of our Universe and indeed to the central-suns of living beings. All of these central-suns are called central-brains, in ITNON. When active

Brain-Noots engage in the Creation (which is the growing) of Universes and their celestial bodies, they melt-down, magically, in to the forming of all kinds and qualities of Matter; then, magnetically, the said Brain-Noots with the help of eternal Spirit-Beings called Brain-Noots Gods and Goddesses, and with REASON – attracts the best qualities of Matter, then organises, programs and controls the growing of these central-brains (Suns). Brain-Noots are thus the smallest particles of Matter, which cannot be seen under any microscope. Brain-Noots are neither microscopic nor macroscopic. So how do we know they exist? We sense and experience them when we taste, touch, smell, hear and see persons, places and things within Absolute-Nature. In other words, all things that exist and occupy Space and in whatever quality, degree or standard are a result of Brain-Noots melt-down, with Brain-Noots Gods and Goddesses (i.e., Spirit-Beings) and by REASON. Let it be remembered always!

38. Listen to Reason! Nature-Science is the science of MIND, REASON and Sound-Right-Reason through Brain-Concentration and direct interaction (consciously or unconsciously) with Brain-Noots Gods and Goddesses. Nature-Science philosophy as detailed within the ITNON is the proper resurrectionist philosophy for the people of earth's universe, today. Indeed, REASON, is 'Re and Sun' in conjunction, as in the rays of the suns in Nature. By REASON all things are grown into existence (not created out of nothing), in accordance with the Laws of Nature, the Cycle in Season and the best quality and condition of Matter available, by Nature, at the observed point in time. Mind and Reason is produced by emanated brain energy, which is Source-Energy (or emanated sun-energy; i.e., ray of the sun; REASON). This radiated energy is the torus field of all living things. Let it be remembered always!

39. Listen to Reason! When Brain-Noots meltdown into Matter they form Brains. Thus Brains, are the physical manifestation of Brain-Noots. The Central-Sun (or black hole) of all Universe Orbs is the Central-Brain of Absolute-Nature (i.e., the multiverses). When the Central-Brain ignites and lights up like a bulb it produces energy known as MIND and REASON, enveloped by the torus field. Through intense Brain-Concentration of this Central-Sun, Mind and Reason creates Spirit-Beings – the first beings are known as the original 9 pairs of Brain-Noots Gods and Goddesses. 9 males and 9 females. The better the standard, quality and ability of Matter used up in the forming of Brains, is the better the standards, qualities and abilities of the Spirit-Beings created. Furthermore, all Universe Orbs produce Spirit-Beings through Brain-Concentration in the same manner as how the Central-Sun

produced Brain-Noots Gods and Goddesses. For example: Suns (primary luminaries) produces Spirit-Beings known as Sun-Gods and Goddesses, and likewise; Moons (secondary luminaries) produces Spirit-Beings known as Moon-Gods and Goddesses. All these entities are in one way or another, organisers, programmers and controllers (for better or worse conditions) of persons, places and things – in accord with the Laws of Nature and the Cycle in Season. Let it be remembered always!

The Mechanics of Consciousness

40. Listen to Reason! Consciousness is essentially awareness of self. Therefore, consciousness is self-reflective and self-reflexive. By self-reflective we mean, for example: the capacity of humans to exercise introspection and the willingness to learn

“look deep into nature and then
you will understand everything
better”

— *Albert Einstein*

more about their fundamental law, nature and purpose, and indeed their essence. By self-reflexive we mean: containing a reflection or image of our self. Furthermore, consciousness is self-referential and has the ability to refer to itself, or to discuss its own creation – as if, referring to or, discussing something outside of itself. Consciousness may also appear paradoxical in that context, as it constantly refreshes itself with new thoughts, new ideas, new concepts and new paradigms all about itself. The dynamics and mechanics of consciousness is that there is nothing outside of consciousness; it can only reflect and reflex upon itself. Let it be remembered always!

41. Listen to Reason! Everything is consciousness and consciousness is everything. All is consciousness and consciousness is all. All things that are created are grown into existence by consciousness and with conscious effort. There are no accidents or mistakes in existence. Likewise, there are no victims or injuries in existence. All that ever was, is all that is, and is all that will ever be; and that is, consciousness. However, human beings of today are only able to reflect or reflex tiny segments of reality, in stages called time. We are only able to see and experience partial reality. Yet, at any given time we can only see and experience what we believe to be true. Let it be remembered always!

42. Listen to Reason! Take the bell curve diagram ahead, for instance. There are those people on the far left of the curve who have very limited views of reality and are therefore dimly conscious. Then there are those in the middle of the curve that have more general views of reality and are accepted as being sane, normal and rational. And to the far right

are those that have more advanced and revolutionary views of reality. Notice the small number of people at either end, whereas the larger population so to speak are in the middle. As the bell curve shifts along the time line, eventually a small portion of those people that were considered sane, normal and rational become dimly conscious – or more precisely, their consciousness did not evolve or expand. And likewise those that were considered advanced and revolutionary become the new sane, normal and rational, albeit with a much larger population. And of course, a very small group are advanced forward in their revolutionary rationale of reality and experience. Can you see how this works? The bell curve is a natural process, especially when used for calculating averages and means of consciousness of a population. But in a world of control and deception, which is what we experience today along earth's current transitioning from one age to another, the people on the far right tend to be badmouthed as crazy and sometimes end up in institutions for the mentally insane. But not all. Even among the so-called elite and world polity, there are those advanced thinkers and visionaries who play their part in the control and manipulation of the masses – through their shadowy control of mediums such as religion, education, media, sports, entertainment and so forth. The point being made here, however, is that consciousness has its place on all levels of creation and nature in general (positively, negatively and neutrally). Consciousness is neither good nor bad, right or wrong. It just is. Consciousness is present in all dimensions and facets of life. Let it be remembered always!

“Fortunately, some are born with spiritual immune systems that sooner or later give rejection to the illusory worldview grafted upon them from birth through social conditioning. They begin sensing that something is amiss, and start looking for answers. Inner knowledge *and* anomalous outer experiences show them a side of reality others are oblivious to, and so begins their journey of awakening. Each step of the journey is made by following the heart instead of following the crowd and by choosing knowledge over the veils of ignorance”.

— *Henri Bergson*

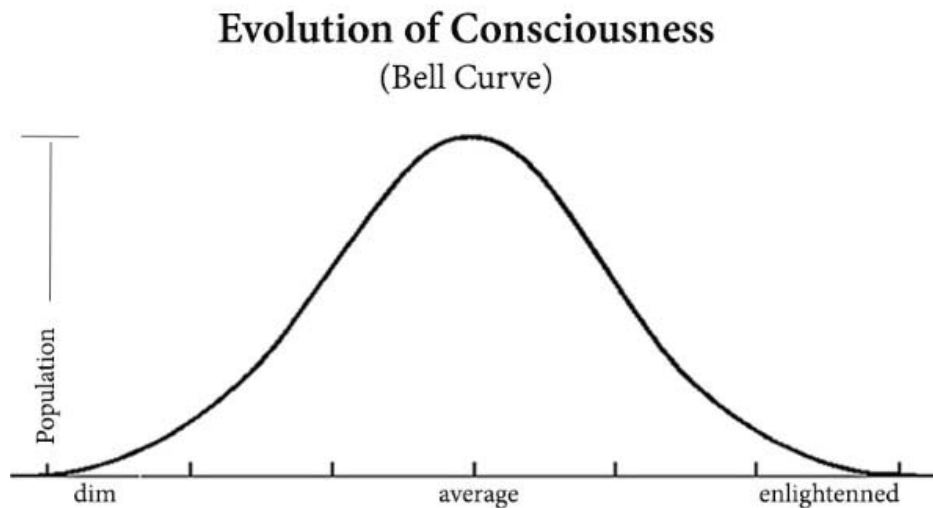

Diagram 4: Bell Curve - Evolution of Consciousness

43. Listen to Reason! As stated earlier, human beings generally only see and experience what they believe to be true about a subject matter, as part of their reality. Some people, particular those on the far right of the bell curve of conscious reality, are able to see and experience two or more realities simultaneously. They literally flip-flop between the two seemingly paralleled experiential worlds. Their challenge is usually with having great difficult in mentally processing the two (or more) realities simultaneously, and when conveying their experiences to others they are often labelled insane. But the phrase 'insane' is a play on words – implying that the individual is or is going crazy. But a better fit would be the phrase 'outsane'. Meaning, the consciousness and perceptive awareness of the individual is outside of normal sanity. These individuals are not all crazy, they are the seers and revolutionary thinkers of tomorrow. Let it be remembered always!

44. Listen to Reason! The mechanics of consciousness suggests that what we perceive as reality are only possibilities and probabilities. That is to say, possibilities and probabilities of movements and angles of consciousness. Better yet, possible and probable angles and views of reality. It is analogous to looking at a hologram. The hologram contains within itself many different things simultaneously. As the viewer of the hologram changes their point of view, what they see literally changes into something else. And, unless a second individual shifts their view of the hologram at exactly the same frequency angle as the first individual, the first individual may have trouble expressing and conveying what they are seeing to the second individual. We have all experienced this one way or another. Some of us often struggle with our parents, siblings and friends when we try to express our point of view on a subject matter. Take watching a movie for instance. You may recall expressing a point of

view of a particular scene, and no one else sitting there watching has even a faint idea of what you are talking about, although you are all watching the exact same movie and at the same time. It simply means that you are having a different view based on your own inner ideals, experiences and paradigms. You are not crazy, to say the least. Let it be remembered always!

45. Listen to Reason! Like the above, and like the hologram example, Absolute-Nature is no different in its ability to present itself – according to our current angle of conscious, perceptive awareness – in our collective angle and view of reality. How we view the earth and the universe is nothing more than our conscious and symbiotic relationship to the earth and the universe. For instance, some people believe that the earth is a spinning ball, whilst others believe the earth exists on an infinite flat plane. Who is to say whether either perception is correct or incorrect? And, what if both perceptions are correct and incorrect at the same time? Is it possible, therefore, that earth is both a spinning ball and a flat plane at the same time? The mechanics of consciousness would definitely be in support of this staggering truth. Could it be that since we, the multiverse as a whole, are on a phase shift from one physical, mental and spiritual age to another... that humans are experiencing the shift from one earth reality to another earth reality? In part two, we will see what the ancients have to say about this. Another way of looking at this can be: that the present reality we are fixated on is indeed an infinite flat plane; but, the world polity (those that control everything) decided to promote the heliocentric model to shift our conscious, perceptive awareness of reality into a matrix of control and manipulation. If this is so, then the new awakening toward perceiving and experiencing a flat plane earth could be a cosmic trigger set in motion to break humanity from the mental chains of control, and away from the current world polity. Remember, both realities (and quite possibly many others) can indeed exist at the same time depending on our angle of reference and are also accessible based on how our consciousness is fine-tuned. Let it be remembered always!

46. Listen to Reason! In quantum mechanics, '**the Planck time**' is the unit of time in the system of natural units known as Planck units⁴. A Planck time unit is the time required for light to travel a distance of 1 Planck length in a vacuum, which is a time interval of approximately 5.39×10^{-44} -s [in 2019]. The Plank unit is named after Max Planck, who was apparently the first to propose it theoretically. To put another way, a Plank unit is the

⁴ Big Bang models back to Planck time – Georgia State University – 19 June 2005

smallest unit of time measurable that has any bearing significance on our view and experience of reality. Let it be membered always!

47. Listen to Reason! The above explanation of Plank time/units is presented here, so that the reader (and listener) can get an idea of how time works in relation to our conscious perception of reality. In the world of Plank time, things happen extremely slow in comparison to what we may call a minute or a single second in human time. The time it takes to jump up and down for instance, may only take one second in human consciousness. But in Plank consciousness that single act of a jump may take millions of plank units of time. If we were living consciously in Plank world, observing a single jump in human world would be like trying to observe the growth and decay of an entire universe. It is virtually impossible; or is it? Let us look at a more practical view of time in relationship to consciousness. Consider doing what you enjoy doing, like a sport or hobby; in contrast to doing something you do not like doing, like a low paying day-job that you have no fundamental interest in. Time seems to move very quick when you are doing what you enjoy, whereas time seems to move very slow when you are doing what you do not enjoy. We tend to lend more focus on the fun things in life than we do on the boring and mundane things. When we lend acute and precision focus on a task at hand, time seems to fly by. Or, time seems to have no bearing whatsoever, until we zone out of the task and zone back to the mundane so to speak. In other words, Time is only relative to consciousness and its relationship to Space and Matter. Let it be remembered always!

48. Listen to Reason! Time, in its relationship to Space and Matter only exist in human consciousness when we observe movement and continuity. We experience *time* only when we literally observe a change in that which is apparent, regardless of the unit of measurement; i.e., plank-units of quantum reality, or the second-units of a 12-hour clock. Time is experienced when we observe a change in relationships between two or more objects. In the same way, consciousness is modified when we observe a change in relationships between two or more objects. Let it be remembered always!

49. Listen to Reason! Truth and un-truth about a subject matter is also experienced in accordance with the observer's point of view and the relationship between two or more objects. What is true for one individual may be taken as un-true for another individual. For instance, the temperature within a room might be warm for one person, whereas another person may experience coldness. Both are correct according to their own experience and incorrect in relation to the other. Yet, the temperature itself has no meaning in reality. The

temperature experienced by the individuals is only felt according to their own unique set of circumstance and conditions – and absolutely nothing to do with reality. Let it be remembered always!

50. Listen to Reason! With the nature and mechanics of consciousness, it is also true that, a lie being told can also be taken as truth if and when presented as truth. For instance, an individual may tell his neighbour a lie that directly affects the neighbour emotionally. Thus, even though it is an un-truth told, the neighbour visualises what they are being told and internally chooses to accept the situation as a truth. And, their immediate nervous system's reaction is one of emotional turmoil. In other words, events and circumstance are essentially meaningless until we consciously interpret them with meaning. The meanings we give events and circumstances are only real to us within our own experience and not in reality. Let it be remembered always!

PART TWO – Flat Plane Cosmology

Introduction to Flat Plane Cosmology

Debunking the Heliocentric Model

51. Listen to Reason! The heliocentric model of our local universe as theorised by **Nicolaus Copernicus** sometime between 1507 and 1515 is exactly that; a theory. It has never been proven and probably may never be proven. The theory and associated doctrine is known as Heliocentrism, and by Nature and by Reason, is an imbalanced juxtaposition of our earth and neighbouring luminaries. *“In order to have a balanced rationale about our universe, we must consider all the facts, not just some of the facts”*⁵. Yet, billions of people have bought into the imbalanced “idea” of the heliocentric model and takes the postulations of this model as real. Therefore, it is real to them regardless of what anyone else says. Correct? These individuals, however large in numbers (i.e., centred along the bell curve of consciousness) have either consciously chosen to stick with their current view of the holographic universe, i.e., turn a blind eye to anything else presented, or they are far too mentally imprisoned to deal with the new phase-shift of reality that is eminent. In other words, our universe (and indeed the multiverse) exists having a holographic nature about itself – suggesting that there are many ways in which the universes can be experienced. All truths and views are only *half*-truths and views. Let it be remembered always!

52. Listen to Reason! Going back to the bell curve, in part one of this writing, we can also demonstrate that it is not just the positioning of consciousness on the curve that should be considered. We should also consider the breadth of consciousness. Some people are very narrow minded while others have a more broadened view of reality. Those of the latter,

⁵ Maxim coined by Atenubi Taharakhti

tend to be the people that experience what they may misinterpret as being clairvoyant in multiple realities. Just because they see other views of reality does not suggest exactly that there is another *parallel* reality. Rather, the view of reality as a whole is being broadened by the individual's perception. The broadened view, experientially, is the process of the individual in constant angle-shifting of their view of the holographic universe. Therein lays the paradoxical nature of consciousness, as mentioned in part one of this work. Consciousness has the ability to seemingly contradict itself... i.e., disprove its own beliefs and ideals while adopting new beliefs and ideals. Correct? The term cognitive dissonance fits in perfectly here. Cognitive dissonance is an inner mental and emotional discomfort that is experienced, when someone struggles with their core belief systems, when being presented with new ideas, new thoughts and new concepts that makes logical and reasonable sense. The individuals to the right of the bell curve are more likely able to experience reality in multiple dimensions, due to their ability to willingly broaden their consciousness so to speak, while other individuals mainly on the centre of the bell curve are less able to. Currently (2019), there is a massive shift taking place from one major perception of reality to another – a shift in perception from a globe earth to a shift in perception of a flat plane earth. Let it be remembered always!

53. Listen to Reason! Remember, the mechanics and nature of consciousness demonstrates that universes (within a multiverse) can be viewed and experienced in multiple dimensions by observers. These multiple dimensions exist simultaneously and only seem separated based on the observers' point of view and angle of the hologram of Absolute-Nature. One might say, we are talking about the difference between the mundane and arcane worldviews; the difference between the generally accepted worldview and the worldview that is held by the initiated. Since, collectively speaking, humanity is slowly shifting away from a heliocentric model, Absolute-Nature is now (by timely circumstances and conditions) tending to reveal itself as a flat plane model of universes held within torus fields. However, the torus shape itself, still lends to the idea of a global phenomenon. In other words, all perceptions of reality are true and un-true at the same time. People generally have the ability to find truth and falsehood in any given circumstance. This is no different from arguing whether an atom exists as a global (3-D) construct or as a flat plane (2-D) construct. Either way, what we perceive an atom to be has no bearing on the atom itself. It is what it is. However, the assumed global construct of an atom can be demonstrated via a 3-dimensional model; whereas, the likewise assumed flat plane

construct of the same atom can also be demonstrated via a 2-dimensional model. Both views can be justified and ridiculed at the same time depending on the observers' angle and point of view. Check? Let it be remembered always!

54. Listen to Reason! Since the year 2015 circa 2019, hundreds of millions of people are now buying into the *idea* of a flat plane cosmology and are conceptually debunking the global earth and heliocentric model. How is this possible? How is this possible after many hundreds of years of humanity's belief of a spinning ball earth? Simple research will show that what we once believed to be a globally shaped earth no longer makes rational sense by millions of people. In this section we will explore a number of reasonings, investigations, historical accounts and proofs that supports what is being presented as a non-reality globally shaped earth. The forthcoming evidence will demonstrate that earth's people of today are definitely on a phase shift and collective conscious transition from one reality to another. Let it be remembered always!

55. Listen to Reason! Each individual, consciously (and also spiritually, mentally and physically), experiences what he or she believes to be true about their life and their reality. In the same way, a group of people (of a religion or spiritual order, for instance) also experience life and reality according what they believe to be true. Using that same analogy, if an entire world of people is sharing common lifestyles and belief systems it would be reasonable to say that the world they live in would be experienced in exact accordance to what they believe to be true about their world. On a grand scale therefore, a universe with all its persons, places and things would be lived and experienced directly in accordance with its collective consciousness. Indeed, the collective consciousness of Absolute-Nature includes the collective consciousness of its human lifeforms and their collective consciousness. Let it be remembered always!

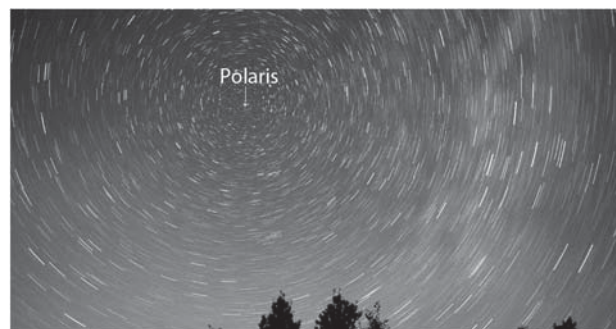

56. Listen to Reason! The heliocentric model has never been proven. Therefore, it was never taken as a scientifically sound fact. Science in action is about creating and presenting an idea or theory. Then, the scientist sets out to prove that idea or theory with practical applications. He or she must be able to demonstrate the model multiple times to the satisfaction of those they are presenting the model to, before the model is accepted as fact. Another phenomenon that has never been proven is the theory of gravity. Einstein made it clear that his postulation and thesis of gravity is only theoretical and he never actually proved it, nor has anyone since then. Newton, two centuries before Einstein, also had theories for gravity, and famously refused to even attempt to demonstrate. Therefore, like

the heliocentric model, gravity is also not a scientifically sound fact. Experimentally, and by reason, what you and I can easily demonstrate is the relationship between mass and density. For instance, if we hold a tennis ball in our hand and decide to let go it will fall to the ground. What we can say about that quite simply is that the mass (weight) of the ball is heavier than the density (weight) of the air (which is primarily oxygen) ... so the tennis ball defies the air's density and falls to the ground. It is as simple as that. Similarly, if we fill a balloon with helium (a gas which is lighter than oxygen) then it will float for a considerable amount of time. Again, it is as simple as that. What we are told to be gravity is simply the relationship between the mass of objects and the density of the air within the atmosphere. Let it be remembered always!

57. Listen to Reason! Through basic observation there are many things that we can reason with (mentally figure out) that will debunk the heliocentric model. In this and the next section we will flesh out several observational phenomena about our earth that demonstrates that we are not standing on a spinning ball. We are told by the astronomic and scientific community that earth is spinning at an average rate of 1000 miles per hour, yet we feel no movement whatsoever. We are also told that the earth is travelling around the sun (in the heliocentric model) at an average rate of 67,000 miles per hour. We are also told that the solar system travels around the galaxy at an average rate of 514,000 miles per hour. Not to mention the galaxy itself is also moving at tremendous speeds, 1.3 Million miles per hour, around a so-called universal centre. Now, here is the golden question. With such speeds and movements that our earth is involved with, why is it that we see the exact same star formations year after year, decade after decade. In fact, the same star formations that we see today are recorded in many parts of the world going back many thousands of years. Does that not strike the reader (or the listener) as odd? It should. By nature, and by reason, the ideas given based on the heliocentric model is virtually impossible, and literally impossible to prove. Yet, our visual observations of the stars tell us otherwise. Let it be remembered always!

58. Listen to Reason! Our visual observations of the stars above tell us that we are on the stationary surface of a flat plane, motionless inertia, and that the stars above are luminaries that orbit around a central axis directly above the north pole. Directly above the north pole is the central axis *star* known as Polaris (aka pole star). This is an observational fact and

cannot be refuted. The central axis star is called Polaris because it is directly above the north pole and is central to the Polarian realm (as shown in diagram 5). The relationship between earth and sky in this context is called the **axis mundi**. Therefore, the north pole by virtue of its location is the

Picture 2: Polaris – North Star or Pole Star

centre of our flat plane universe. And radiating from the north pole 'mount meru' is indeed the four torus fields, of our cosmic egg toroidal energy, within which our localised universe exists. Let it be remembered always!

Cosmic Egg Universe

59. Listen to Reason! Four separate torus fields are generated from the centre of our Cosmic Egg Universe, as can be seen in diagram 5. The spin and rotation of the aurora australis torus field is approximately 1000 miles per hour; the speed that scientist claim the 'global earth' spins at. The word Torus is synonymous with Torah, Torso, Tarot and is an anagram of Rotat(e). Torus is also synonymous with Rota, meaning wheel, circle or cycle. Our earth exists on a flat plane and sits diametrically inside a torus field. It stands to reason that the next outer torus field spins at an approximate rate of 67,000 miles per hour, and the outermost field spins an approximate rate of 514,000 miles per hour. Let it be remembered always!

60. Listen to Reason! The image below is found in the ancient Mesopotamian civilizations. It is visually depicting a flat-plane earth inside what appears to be three domes or spheres that separate the earth and its atmosphere from waters above and waters below. The centralised pyramid is known as Mount Meru, which is literally centred at the North Pole. Mount Meru is a huge Magnet that plays a part in the radiating of the torus fields that envelop our cosmic egg universe, reality. In the Mesopotamian cosmology, the Earth was created by the god Marduk as a raft floating on fresh water (Apsu) surrounded by a vastly larger body of salt water (Tiamat). The gods were divided into two pantheons, one occupying the heavens and the other in the underworld. Let it be remembered always!

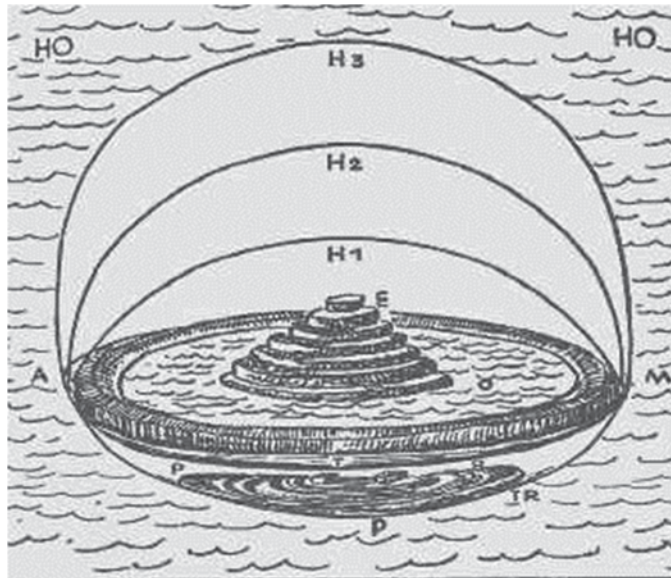

Image 4: Mesopotamian image depicting a flat-plane earth inside what appears to be three domes or spheres that separate the earth and its atmosphere from waters above and waters below.

61. Listen to Reason! Below is an article published in the Hawaiian Gazette in 1907, asking the question, “Was This Map Made 10 Centuries Ago? Not, is this map real? In other words, the establishments already knew of the reality of our vast earth plane of continents beyond the Antarctic ice-ring. The map clearly shows what we know to be our 7 continents in a central location, and also shows several other continents outside of the concentric circles. Let it be remembered always!

Image 5: Ancient map showing many continents of lands outside of what we know as our inner 7 continents.

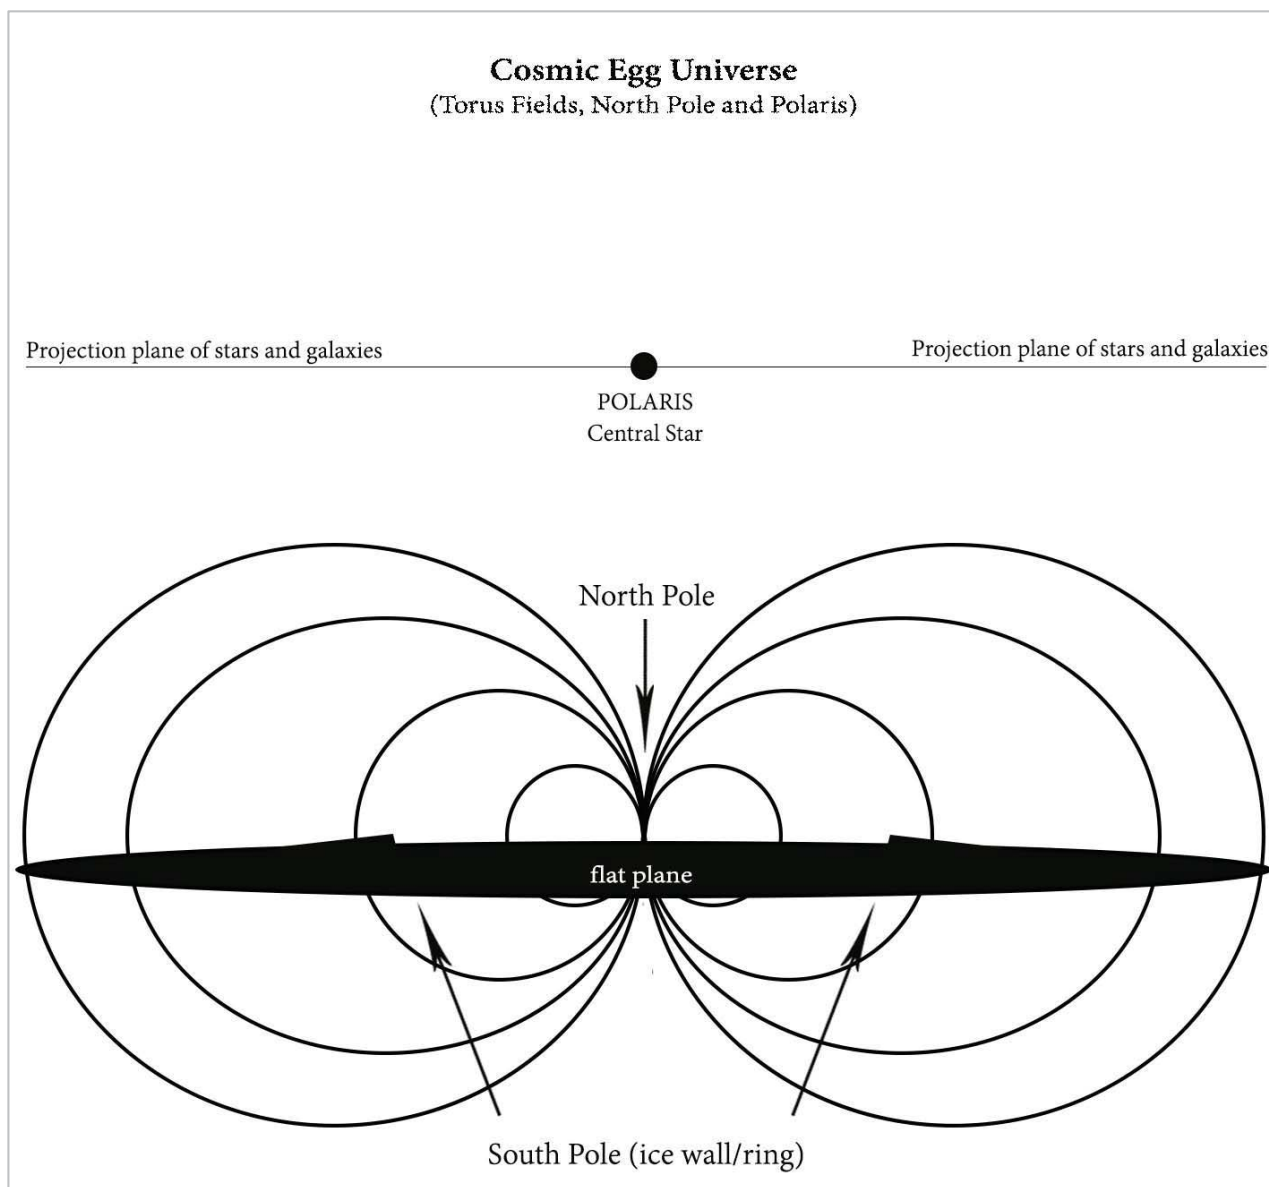

Diagram 5: Torus Fields, North Pole and Polaris

62. Listen to Reason! By Nature, and by Reason; the sun, moon and stars are all luminaries that exist within our own cosmic egg universe. The sun and moon (known in Greek mythology as Apollo and Artemis respectively) are luminaries within the atmosphere of our local universe. Herein lays an introduction to Martin Kenny's geocentric model. The Sun/Apollo and Moon/Artemis are luminaries of equal size but with different intensities of light according to their law, nature and purpose. So, NASA's Apollo Program (or mission) was exactly that. It was a mission within the realm of Apollo. They basically did not go anywhere! Let it be remembered always!

63. Listen to Reason! The Sun, as postulated to be 91-93 million miles away from earth and ginormous in size; is virtually impossible to prove scientifically, by reason and by general rationale. From human-eye observations we see the rays of the sun as it appears to shine

down to the earth. This is best evidence of a localised sun. If it were millions of miles away, then its rays would come down to earth at equal angles. But instead, we observe with our own two eyes what looks like a flashlight shining downward from a very close proximity location. Even in ancient folklore and mythology, such as the Egyptian artefact in the diagram below, we see a sun disk that appears to be within the sky and not millions of miles away, and quite rightly so. Let it be remembered always!

Image 6: Ancient Egyptian artefact demonstrating the locality of the Sun.

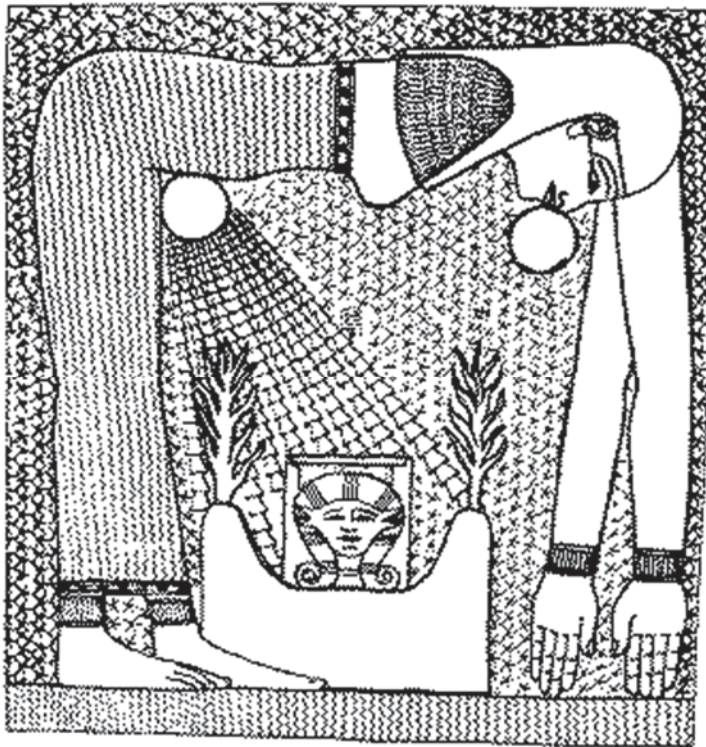

Image 7: Ancient Egyptian Sky Goddess, Nut. Depicted in simulation of a dome covering a flat plane, where the Sun God, Ra, is seen as being held within the dome, sky and atmosphere.

64. Listen to Reason! Image 7 above, shows the Ancient Egyptian Sky Goddess (firmaments), Nut, depicted in simulation of a dome covering a flat plane, where the Sun God (sun), Ra, is seen as being held within the sky or atmosphere. Take note of the angle of the rays of the sun. In this image is the telling of the movement of the sun passing through Nut's star speckled body via her mouth and emerging from her birth canal nine months later (from the spring equinox to the winter solstice). Let it be Remembered always!

65. Listen to Reason! The Moon, as postulated to be an average of 238,855 miles away from the earth taking into account its elliptical orbit; is virtually impossible to prove scientifically, by reason and by general rationale. According to mainstream scientists the first of the four Van Allen belts is said to be somewhere between 400 to 6,000 miles above the surface of the earth. The variation of 400-6000 miles is taking into consideration the flat plane of earth. Meaning, the positioning of the belt appears as a dome above the plane of the earth. However, the toroidal nature of the belt means that there is a belt above and also below. NASA claims that it is impossible for any space-astronaut to travel beyond any of the Van Allen (cosmic radiation) belts due to the high energy microwave radiation and resistive force, which literally burns-up anything that attempts to go beyond. So, here is another golden question: how is it possible that NASA sent men to the moon in 1969 and have failed to go there again ever since? People within the so-called 'woke' or 'conscious' communities already know that the moon landing was a fake. It was a movie show produced by NASA for the world to see. Let it be remembered always!

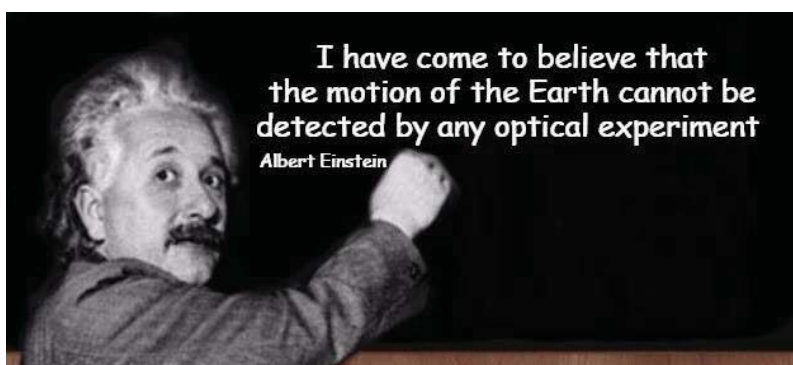

Image 8: Einstein Dec 14, 1922

Flattening the Curve

66. Listen to Reason! "In the beginning were The Suns and The Suns are with Nature and The Suns are Nature and The Suns (The True Stars of The Universes) are THE ORIGINAL GODS

AND GODDESSES who grew Absolute Nature (by way of their Brain-Noots and Energy Nine-Reason) into CREATION ORDER”⁶. Let it be remembered always!

67. Listen to Reason! Just through basic observation, there are two other things we can definitely be sure of when it comes to whether we are on a global earth or a flat plane earth. 1) there is no evidence of movement, and 2) there is no evidence of curvature. As far as the eyes can see from left to right there is no curvature. Even where the earth is being viewed from high altitude air craft, there is no sight of curvature. Better yet, if we are to observe a ship on the ocean sailing away from view, we see what appears to be the vessel going over the horizon. Right? Wrong! If you were to take a pair of binoculars and look at the ship you will see that the entire vessel comes back into view. I challenge you to try it for yourself. Eventually the vessel will go out of view again. But if you are to take a very powerful telescope and look at the ship, again, you will see that the entire vessel comes back into view yet again. Furthermore, the vessel would have gone at such a distance where it would have completely disappeared over the horizon due to the “curve”, so whether using binoculars or telescopes the vessel would not have come back into view anyway. This simple experiment is experiential proof that we are on a flat plane and not a spinning ball. Let it be remembered always!

68. Listen to Reason! Earth exists as a flat plane with concentric rings of at least four different realms. Martin Kenny in his flat plane cosmological model lists the different realms as follows. Let it be remembered always!

1st Realm	2nd Realm	3rd Realm	4th Realm
Polarian Realm	Atlantean Realm	Lemurian Realm	Hyperborean Realm
Androgynous Sun and Moon – Mercury	Sun – Apollo Moon – Artemis	Sun – Mars Moon – Venus	Sun – Saturn Moon – Jupitar

Table 1: The four realms with their suns and moons, by Martin Kenny

69. Listen to Reason! In order to accurately measure anything in reality (distance, speed, angle or height, width, breadth etc.) you need an absolute point of perspective and reference. Since the heliocentric model says both the sun and earth are balls hurtling through space at tremendous speeds, neither one of them can be the absolute point of

⁶ ITNON, book two, p37 #44.

reference; neither can the galaxy for that matter. But with the flat plane model we have an absolute point of reference for everything, which is the North Pole. Everything is centred around that phenomena, including the Pole Star that is pinned directly above the North Pole. Let it be remembered always!

The Van Allen Belts of Earth Plane

70. Listen to Reason! Our local universe, which includes what we know as our solar system is held within what NASA calls Cosmic Microwave Background (CMB) radiation or Van Allen Belts. The following four phrases are therefore describing the exact same phenomenon:

- a. Cosmic egg in creation stories
- b. Electromagnetic torus fields around the earth
- c. Cosmic Microwave Background radiation
- d. Van Allen Belts

71. Listen to Reason! The following is the basis of the geocentric model: Our earth domain is an a flat and motionless plane of land that runs diametrically across the heart/middle of this cosmic egg universe⁷. This plane is divided into 4 concentric districts, each separated by their own electromagnetic torus fields (Van Allen belts). The atmosphere, as easily as we move through it on the surface of the Earth, can pose a significant barrier to fast-moving objects. Air resistance is a major factor in designing everything from cars to parachutes to aircraft. If you have ever been out in high winds, then you have felt the kind of barrier wind can produce to your own motion, and how much force it takes to move in resistance to it. The Van Allen belts pose very similar resistance. It is literally impossible for any man made vehicles to escape the innermost belt, let alone the outermost belt. Let it be remembered always!

72. Listen to Reason! Due to the restriction and height of the inner most Van Allen belt, which sits around 400 to 6000 miles above the earth, space shuttles (or better yet, high altitude aircraft) circle at around 200-300 miles above the earth. The International Space Station (“ISS”) circles at an average of 250 miles above the earth. The Van Allen belts may not necessarily be a 100% physical barrier to spacecraft. They are a kind of trap for charged particles like protons and electrons. They are held in place by the magnetic field of the earth,

⁷ Martin Kenny, Cosmic Clock - Creation, Space, Time, Matter, Extraterrestrial lands and beings – video presentation.

and so they trace the shape of the magnetic field itself. The problem with the Van Allen belts is not in them being impossible to penetrate, but that the charged particles they contain are damaging to human bodies. Therefore, the possibility of human beings travelling beyond these belts, and surviving, is literally zero%. Let it be remembered always!

73. Listen to Reason! So-called flying saucers and cigar-shaped crafts are not of extra-terrestrial origin. They are constructed right here on earth, based on ancient technology. Many of these crafts were constructed by privately funded entities setup by Germany. Some of the bases for manufacturing and testing these crafts were setup in the Antarctica. They literally built bases deep within the ice and also on the surface in certain areas. Similar privately funded entities of the United States were also setup; and they were about confronting these German bases within the Antarctica and taking control of them. Hence, the following projects were on their way: Operation High Jump, Operation Deep Freeze and Operation Fishbowl. There are many other projects also. But these three are the main ones. Let it be remembered always!

74. Listen to Reason! **Operation High Jump** is the official title for The United States Navy Antarctic Developments Program, **1946–47**, and was a United States Navy operation organized by Rear Admiral Richard E. Byrd, Jr., USN (Ret), Officer in Charge, Task Force 68, and led by Rear Admiral Richard H. Cruzen, USN, Commanding Officer, Task Force 68. The common phrase “up and out into space” or “up into outer-space” in one context, is referring to Operation High Jump. It literally means: get up above the 200 ft (average) ice-wall of the Antarctic South Pole ring-of-ice and then off into outer-space. In other words, outer-space does not mean aiming and shooting rockets upwards. It means aiming outwards into the

Image 9: Comparison of the most common map of flat plane earth and the United Nations flag.

vastness of earth's flat plane where countless other lands and continents exist (see news article, image 5). Let it be remembered always!

75. Listen to Reason! **Operation Deep Freeze** (OpDFrz or ODF) is code-name for a series of United States missions to Antarctica, beginning with "Operation Deep Freeze I" in **1955–56**, followed by "Operation Deep Freeze II", "Operation Deep Freeze III", and so on. (There was an initial operation before Admiral Byrd proposed 'Deep Freeze'). Given the continuing and constant US presence in Antarctica since that date, "Operation Deep Freeze" has come to be used as a general term for US operations in that area, and in particular for the regular missions to resupply US Antarctic bases, coordinated by the United States military. It has been very unclear for many decades as to what exactly OpDFrz was meant for, to begin with. But it is well known now that there are military bases out there. And two very significant things occurred as part of OpDFrz. 1. NASA was created by the US in 1958, and 2) the Antarctic Treaty of 1959-1961; both events are evidence of the world polity's intent to keep general people away from the area. NASA was setup to fabricate fictitious space programs whilst the Antarctic Treaty was established to keep people away from the truth. Image 9 shows a comparison of the most common map of flat plane earth and the United Nations emblem. The world polity are very well aware of the flat plane universe and made their knowledge of this fact known within the UN flag and emblem. The UN charter took effect in 1945, when the UN began operations; but the flag and emblem was adopted in 1946, around the time of Operation High Jump. Variations of the UN emblem is also used by other entities such as: World Health Organisation (WHO), International Civil Aviation Organization (ICAO), World Meteorological Organization (WMO) and indeed other commercial entities. Also take note of the map in the news article of image 5, again, this shows the NASA and their creators are well aware of these ancient maps of our flat plane cosmos. Let it be remembered always!

Image 10: Organisations that use the UN emblem.

76. Listen to Reason! **Operation Fishbowl** was a series of high-altitude nuclear tests in **1962** that were carried out by the United States and others. According to the conspiracy

community, the 'secret' objective at the time was to see how high the dome (electromagnetic field aka firmament) is, and whether or not the dome could be penetrated. Let it be remembered always!

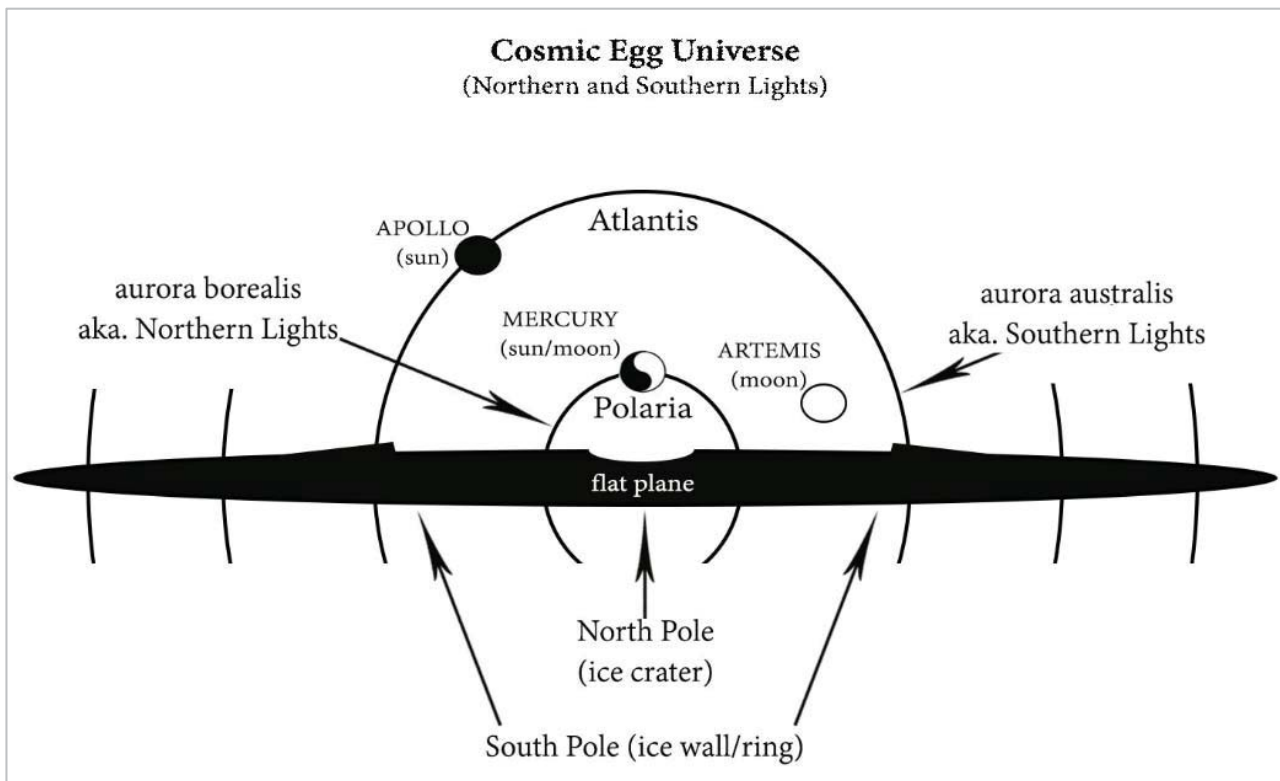

Diagram 6: Northern and Southern Lights – the inner and outer Van Allen belts. These are the two inner most torus fields (that embody the Atlantean and Polarian Realms) of our four dimensional torus field.

The Four Winds

77. Listen to Reason! The four winds, as mentioned and summarized in various ancient writings, are the four torus fields that make up our cosmic egg universe. The torus fields are positioned concentrically to each other. The inner most ring encloses what is known as the Polarian Realm, and has an androgynous sun/moon luminary called Mercury, often referred to the black sun (and sometimes Nibiru). The torus field of this realm can be seen visually and is called **aurora borealis** or Northern Lights, located just beyond the circular North Pole ice ring. Let it be remembered always!

78. Listen to Reason! The second ring encloses what is known as the Atlantean Realm, and houses the sun and moon that we are most familiar with (known in Greek mythology as Apollo and Artemis respectively). The Sun/Apollo and Moon/Artemis are luminaries of equal size but with different intensities of light according their law, nature and purpose. The torus field of this realm can be seen visually and is called **aurora australis** or Southern Lights, located just beyond the circular South Pole ice ring. Let it be remembered always!

79. Listen to Reason! The third ring encloses what is known as the Lemurian Realm, and houses a sun and moon system, that is currently known as Mars and Venus respectively. The fourth and outer most ring encloses what is known as the Hyperborean Realm, and houses a sun and moon system, that is currently known as Saturn and Jupiter respectively. Let it be remembered always!

80. Listen to Reason! By Nature, and by Reason; those solar-system bodies that we were academically taught about, to be planets of the solar system, are luminaries that serve as suns and moons of the different realms of our cosmic egg universe. This includes Uranus, Neptune and Pluto which will be elaborated upon in part three. So, the idea of travelling to Mars for instance, is not literally a journey in outer-space to the luminary known as Mars. But rather, it would be a journey to the outer realm within which Mars is the Sun and Venus is its Moon. Let it be remembered always!

81. Listen to Reason! The four realms were not created all at once. The first and central realm is the Polarian realm. As this realm expanded outward in size, another torus field is created within. Whist the newly created torus field maintains the name Polarian Realm, the outward separated realm is called the Hyperborean Realm. In other words, the four torus fields as we know them today were created as a form of ripple effect. Thus, when the next burst of the torus fields was created, the inner most ring kept the name Polarian Realm, the second ring now called the Lemurian realm and the outer, the Hyperborean realm. Then, the final (most recent) burst of the torus field is emitted. The inner most ring kept the name Polarian Realm, the second ring now called the Atlantean Realm (which is where we are), the third ring is the Lemurian and the outermost ring the Hyperborean, as the following two diagrams demonstrate. Let it be remembered always!

82. Listen to Reason! Each of the realms have their own unique lifeforms including humanoids, birds, fishes and many land based animals. All these lifeforms originated in Polaria and spread outwards into the different realms as the ripple effect of the torus field continued. Symbolically speaking, Polaria is the Garden of Eden where all life originates. Let it be remembered always!

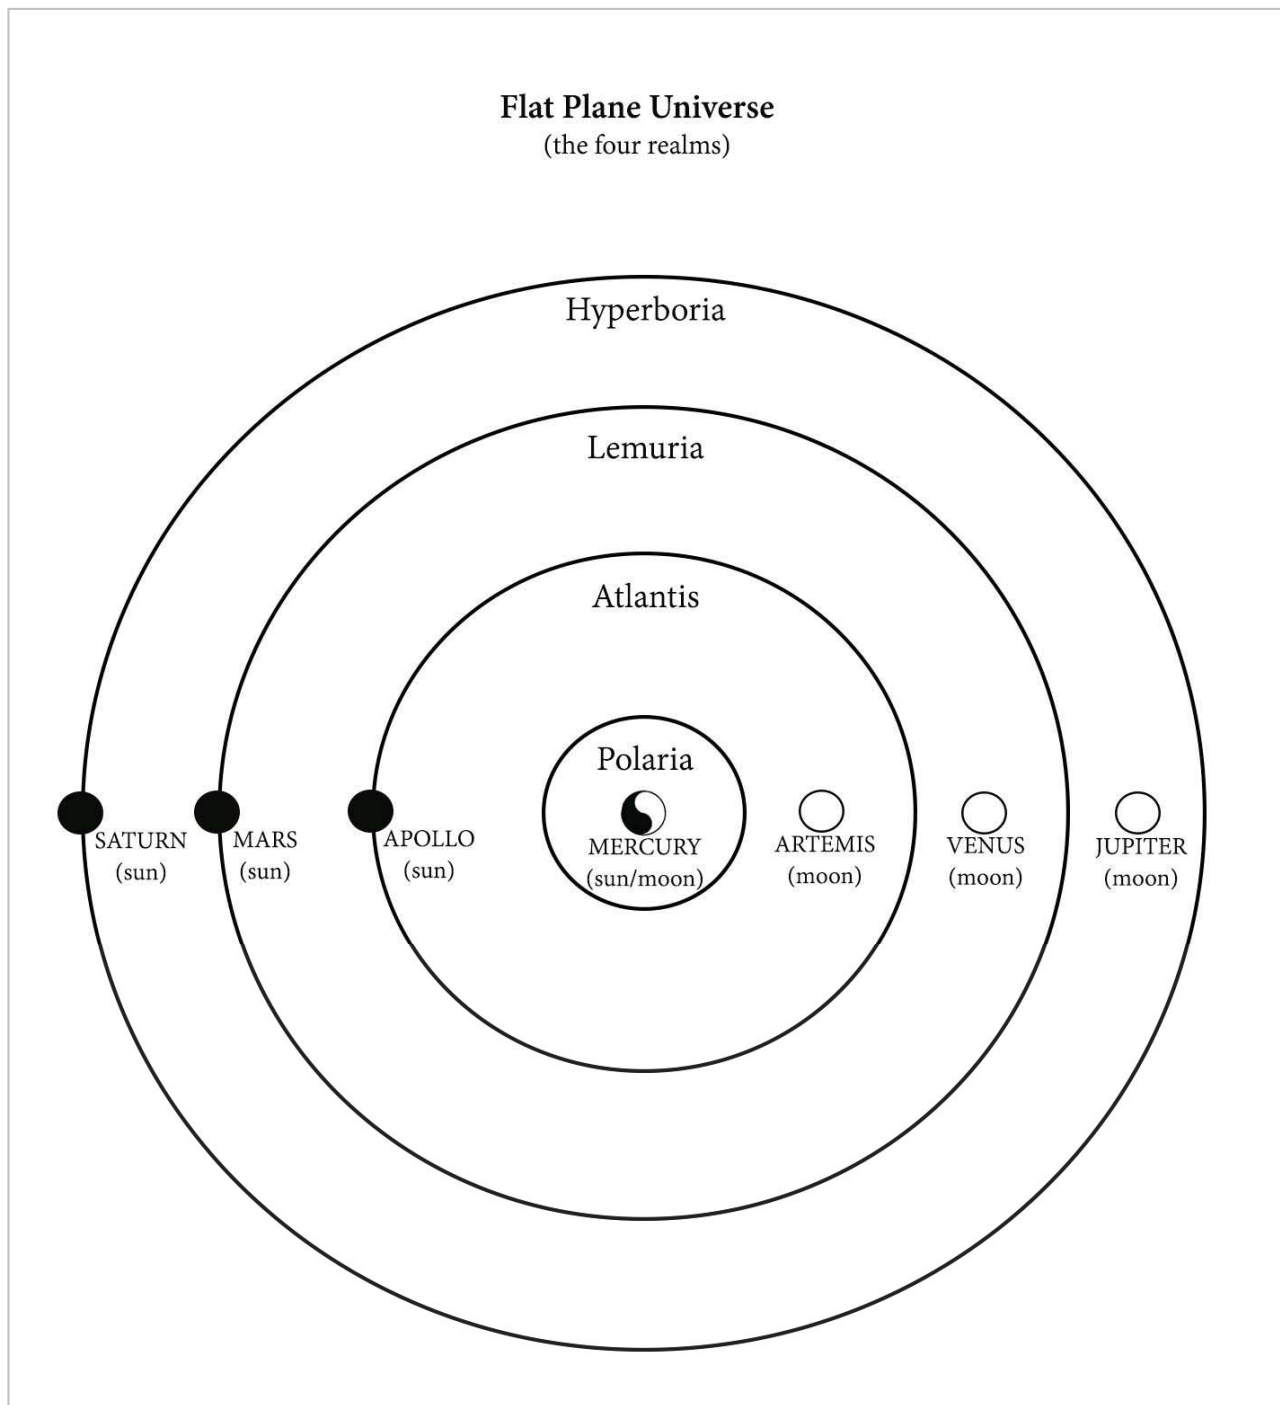

Diagram 7: Flat Plane Universe – view of the four concentric rings and realms from above

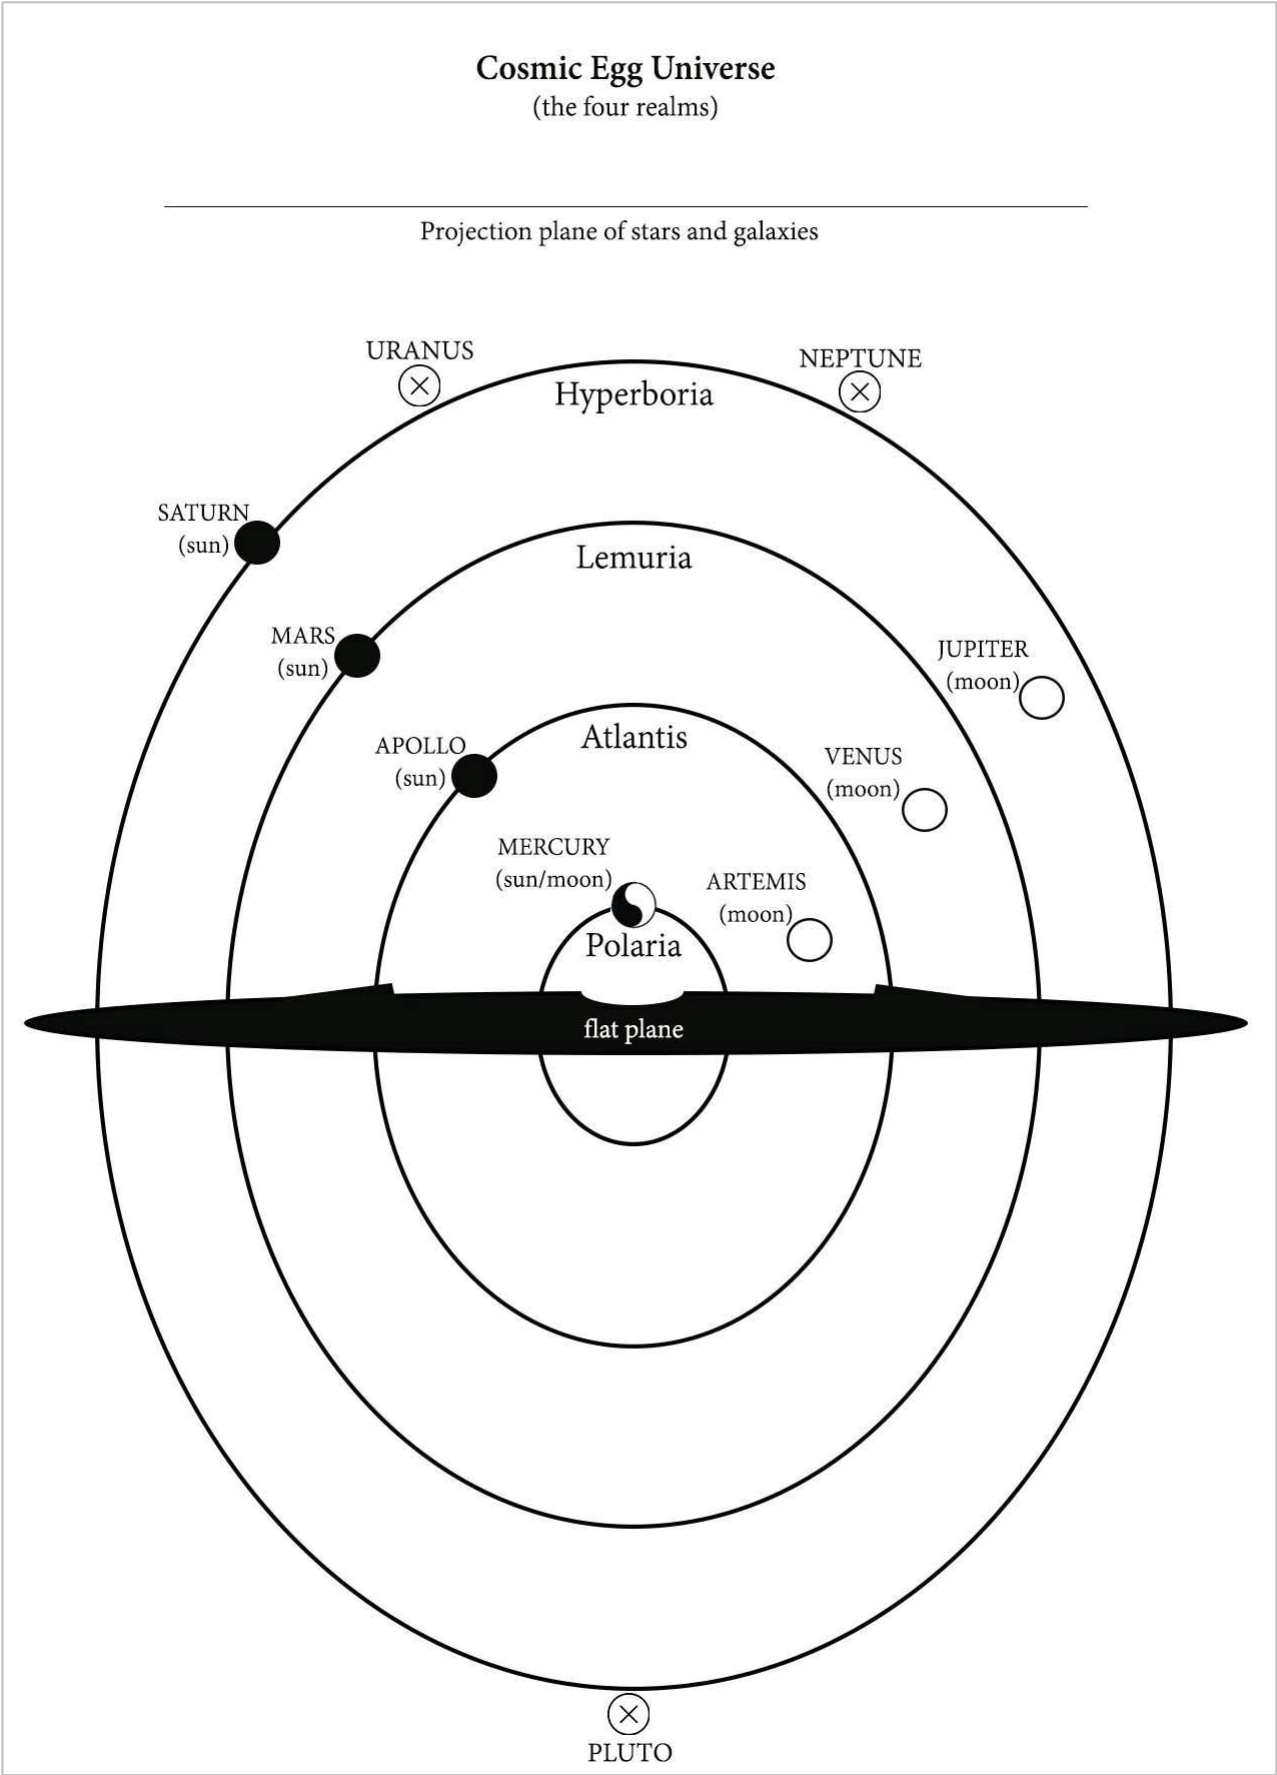

Diagram 8: Martin Kenny’s Cosmic Egg Universe – cross section view

Mount Meru

83. Listen to Reason! We spoke about the Pygmies earlier and their advanced knowledge of the Cosmos. The pygmies also tell us that all of humanity originated in the North Pole. There are four lands (islands) in the North Pole centred around what is called Mount Meru. This area is what is referred to biblically as Eden. Mount Meru is at the centre of our flat plane universe and is depicted on the maps shown, two pages ahead. It is the sacred mountain of Hindu, Jain, and Buddhist cosmology and is considered to be the centre of all the physical, metaphysical and spiritual universes. The mountain is essentially a giant magnet that plays a part in the projecting of the electromagnetic torus fields. Let it be remembered always!

84. Listen in Reason! In Hindu cosmology, the Sun along with all the planets in the Solar System revolve around Mount Meru as one unit. According to Jain cosmology, Mount Meru (or *Sumeru*) is at the centre of the world surrounded by the terrestrial world. In Buddhist

(Javanese) cosmology Mount Meru is the mountain of the gods and the Great Spirit located in the centre of the universe. Let it be remembered always!

85. Listen to Reason! The area within which these four islands exist is called **Agartha**. In other words, Agartha is not a mythological place or giant hole in the top of the globe earth model as some writers have stated. Rather, it is located in the North Pole and is a giant crater within which the four lands (or islands) are situated, centred around Mount Meru. Agartha is often described (in mythology) as a hole (or, through the hole), but it is rather a very large crater or valley continent on the other side of the ice-wall mountains that encircles the North Pole regions. Looking at the two maps ahead, take note that one of the four islands is labelled *Pygmei*, which is relating to the Pygmy tribes that originated there.

“At the centre of the Universe dwells the Great Spirit. And that centre is really everywhere. It is within each of us”.

— Black Elk

Painting 1: Painting of Mount Meru
from Jain Cosmology

The four islands are the original homes of the four main biological groups of humanity: The Pygmy (or Ptah, Ta, Aethiopian), the Phoenician, the Indian and the Mongolian. I would suggest the reader reads ITNON book one for a more in-depth scientific account of these four root *races*. This region, Agartha (including Mount Meru and the four islands) is known as the Polarian Realm. Let it be remembered always!

86. Listen to Reason! Agartha, which is the cratered area encompassing Mount Meru and the four lands of the North Pole is the cradle of all civilisation on our flat plane universe. In some creation cosmologies (such as the Nordic and Celtic), they speak of a world-tree at the centre of the universe. We will see later on, that this world-tree is synonymous with Mount Meru. It is believed in some cultures that mountains of today are the left over stumps of very ancient giant trees. The world-tree, with its branches reaching up into the sky, and roots deep into the earth, can be seen to dwell in three worlds - a link between heaven, the earth, and the underworld, uniting above and below. This great tree acts as an axis-mundi, supporting or holding up the cosmos, and providing a link between the heavens, earth, and underworld. In European mythology, the best-known example is the giant immense ash tree the **Yggdrasil** from Norse mythology⁸. Let it be remembered always!

⁸ Mountfort 2003:41, 279

Image 11: Map depicting the four lands (islands) surrounding Mount Meru

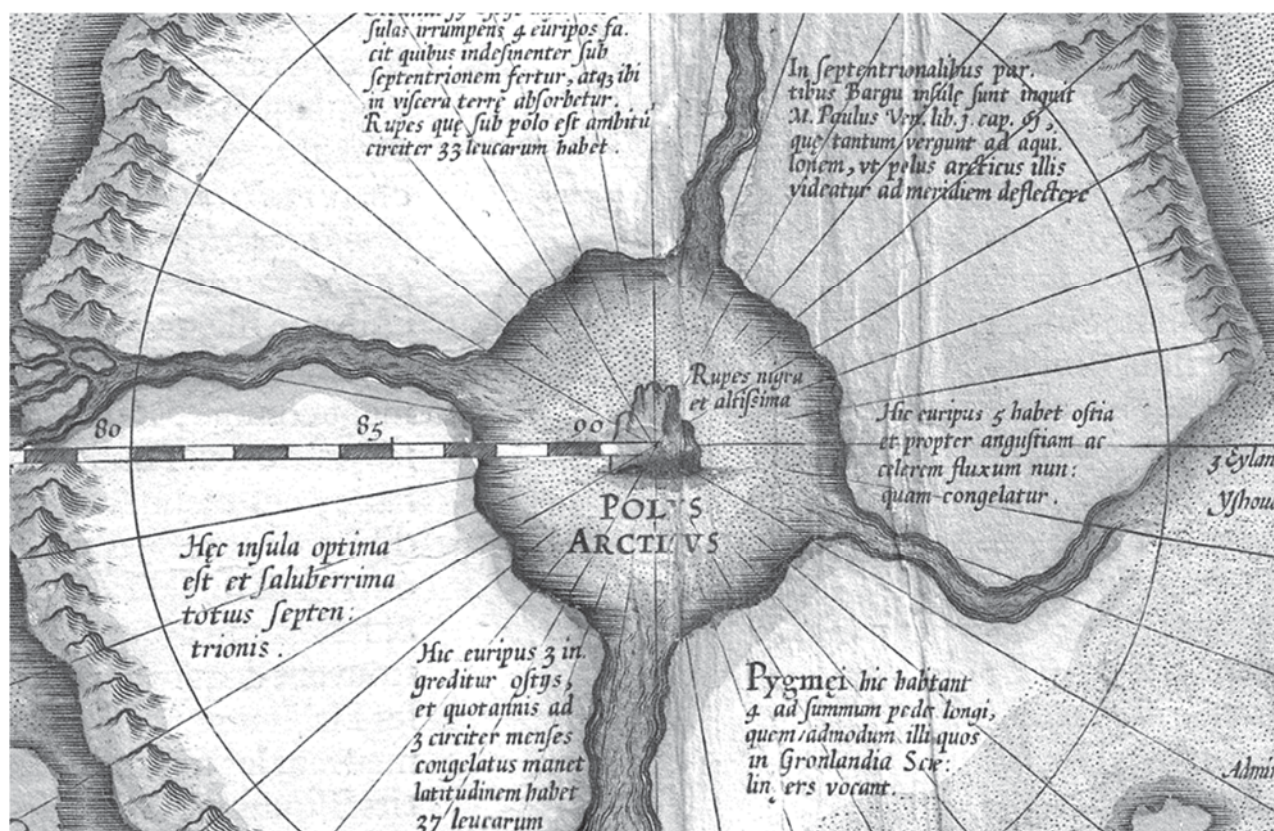

Image 12: Close up of Mount Meru. Note the four rivers flowing out from the centre as echoed in the biblical creation story and the Garden of Eden.

Syncretising Ancient Cosmologies

Vedic cosmic egg

87. Listen to Reason! Knowledge is having the right answers, whereas intelligence is asking the right questions. With syncretism, this writer in his research, takes what resonates and makes rational sense, and ignores what does not. This writer uses

“Syncretism is simply connecting the dots from various sources of information into one logical, sensible and cohesive narrative”

— Martin Kenny

logical reasoning with every bit of information that he researches and combines those with personal experience and observation of nature. With the science of syncretism, one must approach every subject matter with respect to man’s relationship to the cosmos, from divergent perspectives using sound right reasoning including: cultural, mythological, psychological, creative and modern perspectives, in order to arrive at a consensus. Let it be remembered always!

88. Listen to Reason! Indeed, syncretism has its place in the positive and the negative. You can tell the result of a particular narrative by the effects its *believers* have on their environment. Negative syncretism leads to ignorance of the facts, and a decline or narrowing of consciousness. Positive syncretism involves observing ALL THE FACTS, and arriving at a SOUND RIGHT REASON consensus that benefits all people with regards to raising or broadening consciousness. Let it be remembered always!

89. Listen to Reason! In this section, Syncretising Ancient Cosmologies, some of the research notes are copied verbatim. This is done so that the reader (and listener) can see these ancient cosmologies exactly as they are written, or exactly as diligent recent interpreters translated them. The point to be made, is the similarities of all their cosmic egg cosmologies, and not necessarily the one-hundred-percent accuracy of the translations. Let it be remembered always!

90. Listen to Reason! Today’s Vedic (Hindu) texts date back around 3000 BC. The Vedic texts are written in Sanskrit and are some of the oldest preserved writings of our flat plane cosmology and of the creation and growth of our universe. According to the Vedic writings our universe is said to be egg-shaped known as the **Brahmanda** meaning: *world egg*, *cosmic egg* or *mundane egg*. The word Brahmanda is a composite of ‘Brahm’ which means *cosmic*, ‘Brahma’ the *creator* in Hinduism and ‘anda’ meaning *egg*. The Brahmanda is sometimes

referred to as *Hiranyagarbha*, which literally means *golden womb*, *golden fetus* or *golden egg*, and translates to *universal germ* which is the source of all life in creation and the universe. Let it be remembered always!

91. Listen to Reason! The Vedas are the sacred text of Hinduism, just like The Bible for Christianity. That being said, the English language does not always have exact equivalents of the terms used in Vedic texts. *“The Hiranyagarbha Sukta in the Rig Veda, the Vayu Purana, Bhagavata Purana and Brahmanda Purana mention the golden womb, the Hiranyagarbha or Brahmanda, the Cosmic Egg – that is sometimes interpreted as the golden fetus or embryo – that, floating in a dark void, contracted and gave birth to the universe and all that’s part of it – containing both male and female principles in union”*⁹. Let it be remembered always!

92. Listen to Reason! Upon your own research, investigation and sound right reasoning, the writer is confident that the reader will find and prove to themselves all that is written herein this book regarding our flat plane cosmology. The Vedas are clear in their interpretation of the creation of our universe, describing the earth as a flat plane sitting inside a (global or oval shaped) cosmic egg. This flat plane earth is called the ***Bhu-Mandala*** in the Vedic texts. Let it be remembered always!

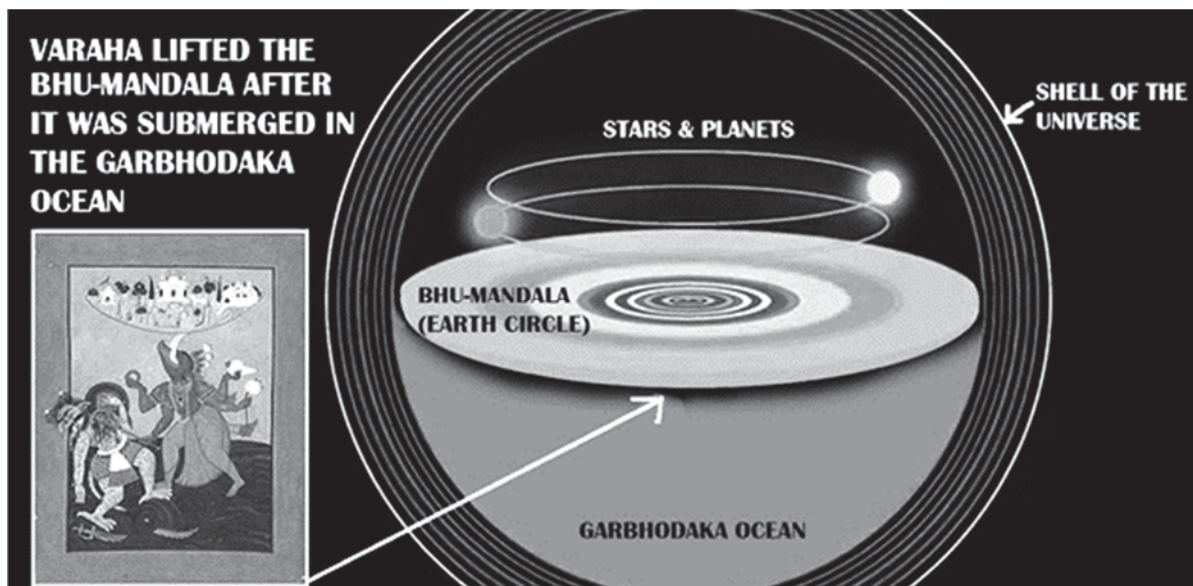

Image 13a: simulation of the Vedic *Bhu-Mandala* (Earth Circle)

⁹ By TOI Crest, Narayani Ganesh

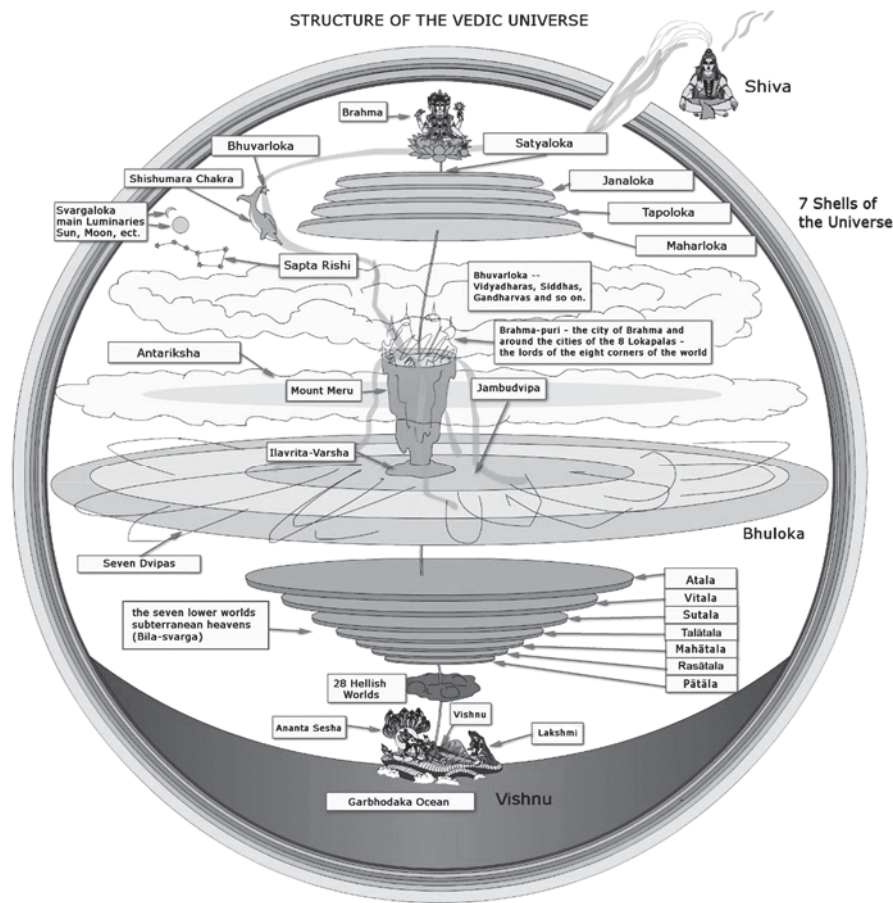

Image 13b: Structure of the Vedic Universe.

93. Listen to Reason! The *Srimad Bhagavatam*, when describing the Vedic cosmic egg system, describes the *planets* floating in space by the movement of air (not gravity). The sun, as we know it, is also described as a great golden egg that floats and orbits the skies directly above the earth. Thus, the Earth (Bhu-Mandala) is an exception to the other *planets* because it is held by *Ananta-Sesha* (not floating in space). The Earth, in fact, is described as a large circular plane that spans billions of miles (not infinite) along the flat plane of the universe. This vast flat plane earth encompasses at least four realms, that we know of, evidenced by NASA's cosmic microwave background radiation rings or the four Van Allen belts. Let it be remembered always!

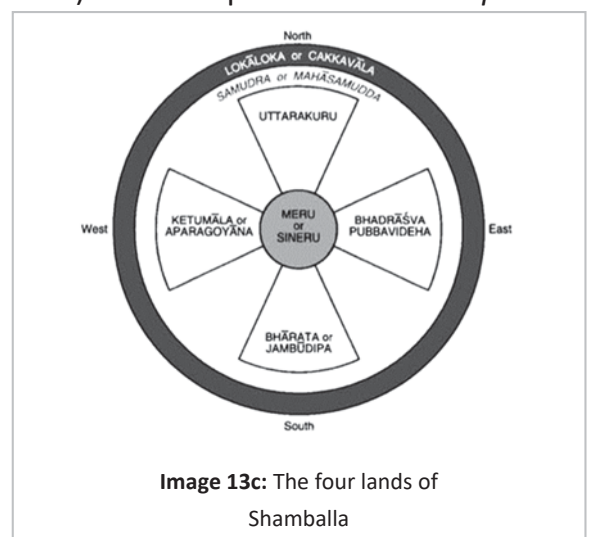

Image 13c: The four lands of Shamballa

94. Listen to Reason! The Vedic texts describe our flat plane earth with the sacred Mount Meru located directly at the centre surrounded by four islands known as: *Jambudvīpa*,

Pubbavideha, Uttarakuru and Aparagoyana. This entire area is called **Shamballa** in the Vedic Texts. Let it be remembered always!

Zoroastrian cosmic egg

95. Listen to Reason! In Zoroastrianism cosmology and cosmogony, the period of material creation lasted 3000 years. Actually, there are four creation periods of 3000 years each. Part narrative of the creation story is as follows: *“First the sky was created (protected by Šahrewar, Av. Xšaθra Vairiia), which enclosed the world like the shell of an egg. The second creation was water (protected by Hordād, Av. Haurvatāt), which filled the lower half of the “egg”. The third creation, earth (protected by Spandārmad, Av. Spānta Ārmaiti), shaped like a flat disk, floated on the primeval waters. On it stood the fourth, fifth, and sixth creations, respectively the single plant or tree (protected by Amurdād; Av. Amərətāt), the uniquely created bull (protected by Wahman, Av. Vohu Manah), and the first man, Gayōmard (Av. Gaiiō.marətan, protected by Ohrmazd himself). The seventh creation, fire (protected by Ardwahišt; Av. Aša Vahišta), was said (e.g., Bundahišn 3.8) to have permeated all other creations. During the 3,000 years of the period of material creation these creations were motionless, and the sun stood still in the middle of the sky”¹⁰*. Let it be remembered always!

Image 14: one of the primary symbols of Zoroastrianism, believed to be the depiction of a *Fravashi* (guardian spirit)

96. Listen to Reason! In Zoroastrianism, a *Fravashi* is a guardian spirit (or Great Spirit). Take note of the image above, a cross section view of the universe, where the guardian spirit is centred and surrounded by what appears to be four realms. The inner realm is depicted black as this is the primary realm of creation, where all life is rippled outward into the other realms. According to the Zoroastrian creation myth, *Ahura Mazda* existed in light

¹⁰ Zoroastrianism cosmology taken from www.iranicaonline.org/articles/cosmogony-i

and goodness above, while *Angra Mainyu* existed in darkness and ignorance below. They have existed independently of each other for all time, and manifest contrary substances. *Ahura Mazda* first created seven abstract heavenly beings called *Amesha Spentas*, who support him and represent beneficent aspects, along with numerous yazads; lesser beings unworthy of worship. He then created the universe itself in order to ensnare evil. *Ahura Mazda* created the floating egg-shaped universe in two parts: first the spiritual (*menog*) and 3,000 years later, the physical (*getig*). *Ahura Mazda* then created *Gayomard*, the archetypical perfect man, and the first bull¹¹. Let it be remembered always!

Greek cosmic egg

97. Listen to Reason! “*The Orphic Egg in the ancient Greek Orphic tradition is the cosmic egg from which hatched the primordial hermaphroditic deity Phanes/Protogonus (variously equated also with Zeus, Pan, Metis, Eros, Erikepaïos and Bromius) who in turn created the other gods*”¹². The egg is often depicted with a serpent wound around it. *Phanes* (the mystic primeval deity of procreation) was believed to have been hatched from the World-Egg of *Chronos* (Time)

Image 15: Jacob Bryant's Orphic Egg (1774)

and *Ananke* (Necessity) or *Nyx* (Night). In the **Pelasgian** creation myth (poem), a supreme creatrix, *Eurynome*, ‘The Goddess of All Things’¹³, rises naked from Chaos to part the sea from sky so that she can dance upon the waves. Catching the north wind at her back and rubbing it between her hands, she warms the pneuma and spontaneously generates the serpent *Ophion*, who mates with her. In the form of a dove upon the waves she lays the Cosmic Egg and bids *Ophion* to incubate it by coiling seven times around until it splits in two and hatches “*all things that exist ... sun, moon, planets, stars, and the earth with its mountains and rivers, its trees, herbs, and living creatures*”¹⁴. Note that in this reference, the earth is separately described and not taken to be one of the planets. Let it be remembered always!

¹¹ Cavendish, Richard; Ling, Trevor Oswald (1980), *Mythology: An Illustrated Encyclopedia*, Rizzoli, pp. 40–45, ISBN 978-0847802869

¹² West, M. L. (1983) *The Orphic Poems*. Oxford University Press. p. 205

¹³ Graves, Robert (1990) [1955]. *The Greek Myths*. 1. Penguin Books. ISBN 978-0-14-001026-8.

¹⁴ “Books: The Goddess & the Poet”. *TIME*. 18 July 1955. Retrieved 5 December 2010.

98. Listen to Reason! The coiling of the serpent seven times around the cosmic egg is symbolic of energy. That is to say, the force and energy that is created by way of the electromagnetic torus field that encases the earth. In ancient times, serpents were a symbol of creative energy and also healing. The number seven as used in Greek creation myths, is found to be recurring in many different stories and situations, such as: the seven days of creation, seven stages of creation, seven wondering stars, seven days of the week, snow white and the seven dwarfs, the magnificent seven and so forth. The caduceus, which is a magic wand or staff with two coiled serpents, is used as a symbol of growth, order, reciprocation and balance – held by Hermes Trismegistus in Greek mythology. Let it be remembered always!

Image 16: The Caduceus of Hermes Trismegistus, symbolising growth, order, reciprocation and balance.

99. Listen to Reason! In Greek literature, we also find the description of the centre of the earth as *Hyperborea* which translates as ‘place beyond the north wind’, where mythological giants live. The north wind is the symbolic term used for what can visibly be seen as aurora borealis. Let it be remembered always!

99. Listen to Reason! In Greek literature, we also find the description of the centre of the earth as *Hyperborea* which translates as ‘place beyond the north wind’, where mythological giants live. The north wind is the symbolic term used for what can visibly be seen as aurora borealis. Let it be remembered always!

Chinese cosmic egg

100. Listen to Reason! In Chinese cosmology the universe began as an egg. A primeval hermaphroditic giant named **Pangu**, born inside the egg, broke it into two halves: the upper half became the sky, while the lower half became the earth. As the god grew taller, the sky and the earth grew thicker and were separated further. Finally, Pangu died and his body parts became different parts of the earth. *When Pangu (also Pan Gu*

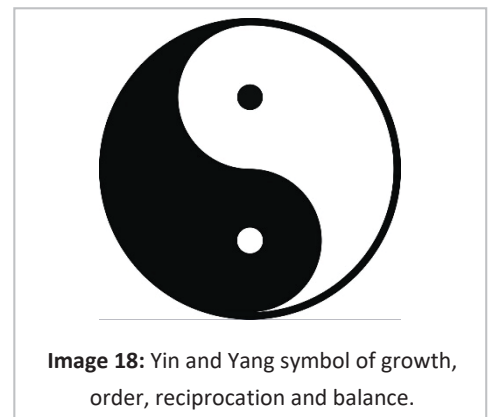

Image 17: Depiction of Pangu

and Phan Ku) died, his breath became the wind and clouds, his voice the rolling thunder. One eye became the sun and on the moon. His body and limbs turned to five big mountains and his blood formed the roaring water. His veins became far-stretching roads and his muscles fertile land. The innumerable stars in the sky came from his hair and beard, and flowers and trees from his skin and the fine hairs on his body. His marrow turned to jade and pearls. His sweat flowed like the good rain and sweet dew that nurtured all things on earth. According

to some versions of the Pangu legend, his tears flowed to make rivers and radiance of his eyes turned into thunder and lighting. As can be seen from this narrative, the creation of the universe is very localised. Everything is here. Of course, other universes exist within the multiverse. But our universe is small and closer in terms of how we relate, than what we have been led to believe by modern scientists. Let it be remembered always!

101. Listen to Reason! This cosmic egg of Pangu, prior to its breaking into two parts, was perfectly balanced with its *yin* (feminine) and *yang* (masculine) principles intact. When Pangu was born, his work was to fashion the world of order out of the primordial elements of chaos. This included the creation of all duality principles we find in nature: up and down, light and dark, positive and negative and so forth. However, there is always the third (or central) principle *time*, which is the keeper and continuity of the other two. Let it be remembered always!

102. Listen to Reason! The Chinese cosmologies echoes what the ITNON books describes as the beginning of the triad existence of SMaT (Space, Matter and Time). Time, being the balancing aspect, is only measured and noted when that which is being observed changes. In other words, *time* is the noticing of a change in *matter* in relation to *space*; or, *time* is the noticing of a change in the direction of *up* in relation to *down*; or, *time* is the noticing of a change in *light* in relation to *dark* and so on. Let it be remembered always!

103. Listen to Reason! Furthermore, emerging from the cosmic egg in Chinese cosmology are four creatures: the unicorn, the dragon, the phoenix and the tortoise. These four creatures are symbolic of the four elements within nature and also symbolic of the four sacred lands at the centre of the earth with the four root races therein. Like the Vedic, the Chinese, the Greeks and the Pygmies, the Japanese also believed they originated at the centre of the earth. The Japanese express that that their origin at the centre of the earth is a sacred place called *Onogoro Jima*, which is an island that was created when the divine couple *Izanagi* and *Izanami* churned the sea with a jewelled spear from their vantage point on the floating bridge of heaven¹⁵. There is a noted similarity of the cratered region known

¹⁵ Kurano, *Kojiki*, page 53

as *Shamballa* and *Agartha* (in the Vedas) and the cratered description of *Onogoro Jima*. Let it be remembered always!

Dogon cosmic egg

104. Listen to Reason! As this writer disclosed earlier, the Dogon's descended from one of the African Pygmy tribes known as the Tellem Pygmy, who say they originated in the North Pole. The Tellem Pygmies taught the Dogon's their stories and myths of creation, in a summarised manner as follows: *"The creator deity first creates an egg. Within the egg are two pairs of twins, each pair consisting of one male and one female. These twins are supposed to mature within the egg, becoming at maturation androgynous (both male and female) beings, the perfect creatures to inhabit the earth. One of the twins breaks from the egg before maturation because he wishes to dominate the creation. In so doing he carries a part of the egg with him, and from this he creates an imperfect world. The creator deity, seeing what he has done, sacrifices the other twin to establish a balance in the world. The creation is sustained by this sacrifice, and it is now ambiguous, instead of the perfect world intended by the god"*¹⁶. The widespread symbols of dualism (the divine twins), the cosmic egg, and sacrifice are basic themes in the structure of this African creation myth. Let it be remembered always!

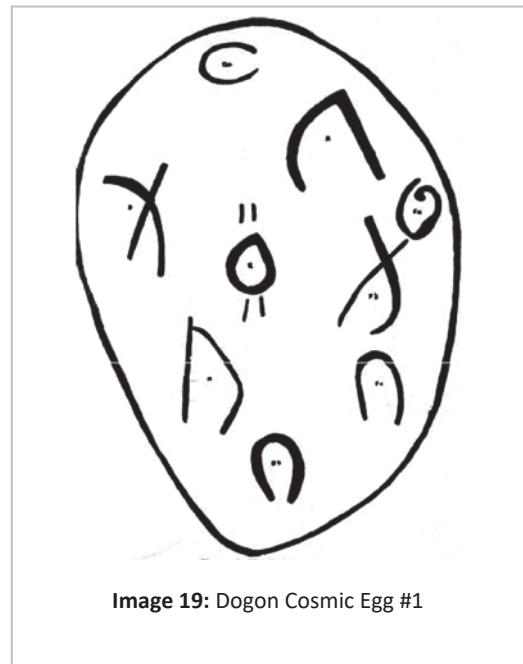

Image 19: Dogon Cosmic Egg #1

105. Listen to Reason! The following is a much more detailed account of the Dogon creation story: *"In the beginning, Amma, alone, was in the shape of an egg: the four collar bones were fused, dividing the egg into air, earth, fire, and water, establishing also the four cardinal directions. Within this cosmic egg was the material and the structure of the universe, and the 266 signs that embraced the essence of all things. The first creation of the world by Amma was, however, a failure. The second creation began when Amma planted a seed within herself, a seed that resulted in the shape of man. But in the process of its gestation, there was a flaw, meaning that the universe would now have within it the possibilities for incompleteness. Now the egg became two placentas, each containing a set of twins, male and female. After*

¹⁶ Charles H. Long, excerpt from: Creation Myth

sixty years, one of the males, Ogo, broke out of the placenta and attempted to create his own universe, in opposition to that being created by Amma. But he was unable to say the words that would bring such a universe into being. He then descended, as Amma transformed into the earth the fragment of placenta that went with Ogo into the void. Ogo interfered with the creative potential of the earth by having incestuous relations with it. His counterpart, Nommo, a participant in the revolt, was then killed by Amma, the parts of his body cast in all directions, bringing a sense of order to the world. When, five days later, Amma brought the pieces of Nommo's body together, restoring him to life, Nommo became ruler of the universe. He created four spirits, the ancestors of the Dogon people; Amma sent Nommo and the spirits to earth in an ark, and so the earth was restored. Along the way, Nommo uttered the words of Amma, and the sacred words that create were made available to humans. In the meantime, Ogo was transformed by Amma into Yuguru, the Pale Fox, who would always be alone, always be incomplete, eternally in revolt, ever wandering the earth seeking his female soul"¹⁷. Let it be remembered always!

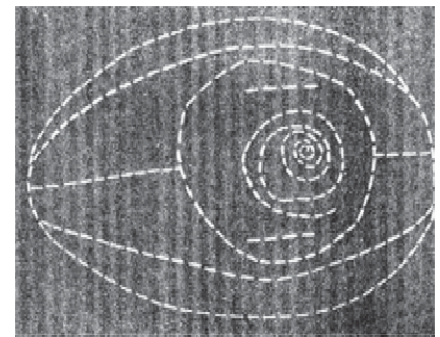

Image 20: Dogon Cosmic egg #2

106. Listen to Reason! There are 9 symbols contained within the Dogon cosmic egg. The number 9 is a very common motif among most indigenous African peoples in regards to the levels of creation and indeed the levels of consciousness. 9 contains all the numbers between 1-9 within the O (the sum of 1-9 = 45 ...4 + 5 = 9). This writer, when addressing who is Nebu Ka

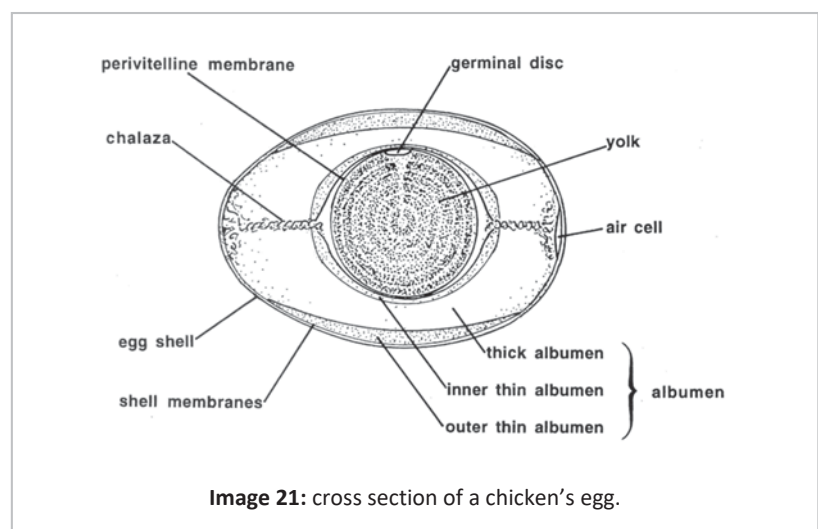

Image 21: cross section of a chicken's egg.

Ma'at (in part one of this book) also expressed the significance of the number nine when mapping significant events in *time*. The Dogon and indeed the Tellem Pygmies have a very

¹⁷ Amma and the Egg that Contains the Universe. Oxford Reference. Retrieved 30 July 2018

intuitive concept of the cosmic egg universe, including the flat plane of the earth and the orbiting luminaries. They also have detailed understandings of our multidimensional reality including the three great existences: Space, Matter and Time! The Universe is considered 'Amma's Egg'. Within her egg, Amma began spinning around, forming the *po* seed (the Black Hole at the Galactic Core). The *po* is 'the smallest (heaviest and densest) thing that was made invisible, at the centre. This is in reference to the invisible sun or Black Sun at the absolute singularity point at the North Pole. Let it be remembered always!

Egyptian cosmic egg

107. Listen to Reason! Whilst the term Egypt is more commonly known, the author specifically refers to a time prior to the recent Phoenician and Hindu invasions. These pre-dynastic times of this location was inhabited by Pygmies and the lands are known historically as Khemet. Remember, the Dogons are descendants of Pygmies. And the cosmology of the Dogons are very similar to that of the ancient Khemetians. For instance, the Dogon know the Khemetian Sun God 'Ra' as 'Amma'. This is where we get the double-barrel composite of Amun-Ra. The Dogons got their cosmology from the Ta/Pygmy Khemetian **Priesthood of Anu**, a system which was also known as the **Temple of Ta**, by the people of Kashta Kingdom (ancient Aethiopia, or today's Congo region), as mentioned in part one of this book. Let it be remembered always!

108. Listen to Reason! Now, with all that has been said so far, let us look at another perspective of our flat plane earth inside a cosmic egg. From the perspective of the multiverse, our cosmic egg is like a bubble inside of a vast ocean of water (see diagram 10 well ahead). The Khemetian cosmology narrates that *Ra* was born out of the chaotic waters of *Nun*, also called *Nu*. Can you see the connection? Nun is the primordial cosmic sea within which egg-shaped universes are created, grown, perpetuated and eventually decay. The cross section of the chicken's egg shown in the previous section demonstrates what the macrocosmic universe looks like (using the as above so below maxim). Note that the yolk is showing concentric rings leading right down to the core (black hole) similar to the cosmic egg universe model. What the Dogon and the Khemetian writings tell us is that our earth and its universe is enclosed inside an egg-shaped electromagnetic torus field surrounded by a vast ocean. Let it be remembered always!

109. Listen to Reason! Another way of looking at the cosmic egg, is to look at the relationship of a single cell to its plasma environment. The cross section of a single cell is

multi-layered also. Both the cell and the egg shows a concentric ringed, or ripple effect, situation just like the ripple effect of the electro-magnetic torus field around our local universe. The earth is basically a gigantic bubble inside of a dark infinite ocean of magnetism. This is akin to when an individual who has a new (*Nu*) idea for a *project*, a bubble literally appears over the individual's head (just like we see in the cartoons). The Brain-Noots Gods and Goddesses operate in exactly the same way. They literally *project* their new ideas out into the void in a form of bubble. When a new universe is being created a cosmic-egg bubble is formed, and the ripple effect begins. Then there is a literal splitting of the egg that occurs. The bottom half contains water, which is levelled out. In other words, contained water is always flat. This is a scientific fact, right? The upper half of the egg contains the sky. And what is the primary element of sky? Air. Another way of looking at this is to say that the inside of the cosmic egg is electricity enclosed and separated from magnetism; hence, the shell is a combination of electricity and magnetism, called an electro-magnetic torus field. Let it be remembered always!

110. Listen to Reason! The reader (and listener) will notice that this writer is constantly returning back to the Nature Science philosophy of the ITNON. The majority of part two thus far, was taken up with fleshing out and understanding various cosmologies that were consistent in their explanation of creation, as the universe being born and grown as a cosmic egg. But we cannot leave out the Creator in all of this. In fact, the ancients never left out the Creator in their narratives, although each cultural narrative may describe the Creator in different ways. In *Noone* Nature Science philosophy the Creator is the workings of Brain-Noots, Reason and Spirit-Beings. Their workings are in between, the sandwich layer, of what we term as Space and Matter; *space* being magnetic and *matter* being electric. Noots, existing in the primordial sea of magnetism are thus magnetic as well as magical in their nature. Noots meltdown into matter and forms brains. In the context of the cosmic egg, Noots form the central brain-core, called a black hole or Black Sun. *Black*, alludes to the invisibility of this phenomena. This is known as the *po* in Dogon cosmology. Let it be remembered always!

111. Listen to Reason! The flat plane universe of the earth itself, is generated from an electrical spark of light within the infinite vacuum of magnetism and takes the shape of an egg. The distinction being made here is the relationship between darkness and light. Darkness is magnetism whereas lightness is electricity. Correct? This is also demonstrated in the Chinese cosmological system of the perfectly balanced *yin* and *yang*. By now, the

reader (and the listener) should be understanding why syncretism is important. Because, it is the only way (with sound right reason) we can arrive at a sound consensus regarding the Nature of our local universe and the multiverse in general. Let it be remembered always!

112. Listen to Reason! When a cosmic egg is created, it has at its centre its alpha universe orb, or universal electrical central sun (singularity) called a nebula. The outer shell of the cosmic egg is protected by a gas-sphere which holds it separated from the infinite vacuum of the magnetic hydrosphere. The ITNON books also elaborate on the polarity of magnetism and magic – *“Magnetic Vacuum is The Male, Husband, and Father, and that Magic Matter is The Female, Wife and Mother”*¹⁸. Let it be remembered always!

Image 22: Khemetian Cosmic egg universe

113. Listen to Reason! The ancient Egyptians had several versions of the same story based on the different religions so to speak, of: Heliopolis, Thebes and Memphis (“HTM”). The narratives, although presented with slight differences are often cantered around the **8 Ogdoads**, or 8 primordial gods. 4 pairs of male and female. The Dogons also have a similar concept to these 8 deities. These 8 celestial beings are born out of a cosmic egg laid by an Ibis bird; symbolically speaking of course. In parts of the narrative the god **Tehuti** is said to

¹⁸ ITNON book two, p40 #48.

have created the cosmic egg. He is also associated with sound, language, writing and wisdom in general. Let it be remembered always!

114. Listen to Reason! The more popular story is that of the **9 Enneads**. These beings, also born out of a cosmic egg, use up their bodies to create the universe in a manner as follows. **Atum-Re** is the head deity of the 9 Enneads. He produces twin children called **Shu** and **Tefnut**, symbolising Air and water. These twins in turn produce two other twins called **Geb** and **Nut**, symbolising earth and sky. After the latter two, two more sets of twins (four beings in total) are produced called **Ausar**, **Auset**, and **Sutukh**, **Nebthet**. Shu and Tefnut (air and water) fill the atmosphere of Re. The word atmosphere is a composite of *atum* and *sphere*; hence *atum's sphere*. Inside of Atum's sphere we have a separation of Geb (earth) from the heavens, by way of Nut (the sky). The word Atum is also the root of other words like *Atom* and *Adam*; the scientific and Christian renditions of the same. Let it be remembered always!

Image 23: The 9 Enneads

Celtic cosmic egg

115. Listen to Reason! We have spent much time of the egg-shaped cosmic universe as understood by various ancient cultures and biological groups of people. And for good reason. In this section, we will very briefly look at the Celtic cosmic egg, with a twist. The Celtic Druids believe that the universe exists as a world tree divided into three worlds which they called the under-world, the middle-world and the upper-world. Interestingly the middle-world is depicted and explained as having a central core or heart of the earth, having four islands with a sacred fifth island in the middle. Again, we can see the similarities with the previous cosmologies we have looked at herein. Let it be remembered always!

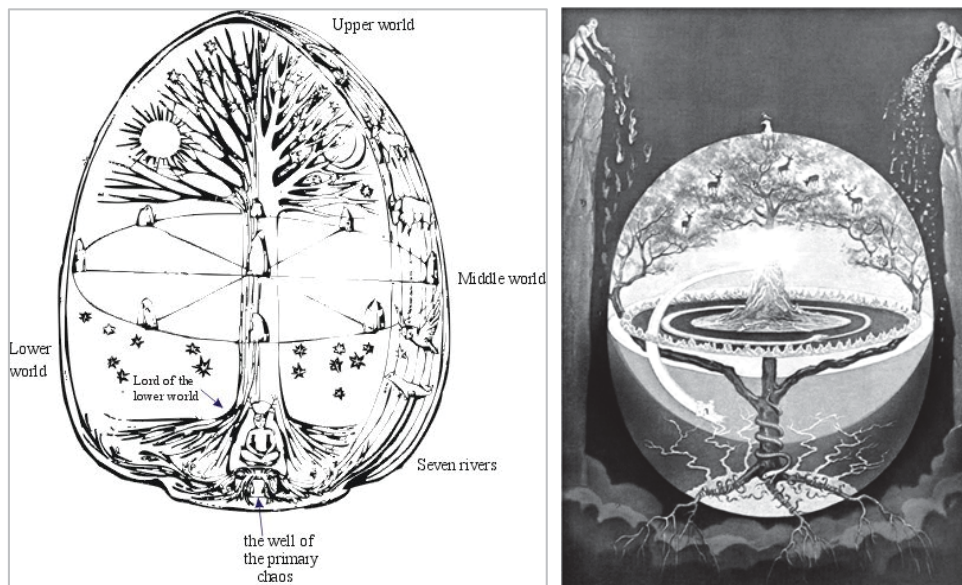

Image 24: 2x depictions of the Celtic Druid's world tree

Nordic cosmic egg

116. Listen to Reason! Norse religion and cosmology were not documented until after Christianity had taken over the Nordic regions, which includes today's Scandinavian territories known as Denmark, Finland, Iceland, Norway and Sweden, including their associated territories (Greenland, the Faroe Islands and the Åland Islands). We have already presented sufficient evidence and facts pertaining to the vast number of ancient cultures and biological groups that had profound scientific knowledge of our cosmic egg reality. So, we will conclude the investigation with the Norse cosmology. Like the Celtic Druids, the Nordics believe the universe to be that of a giant cosmic tree, inside a cosmic oval-shaped enclosure. This oval-shaped enclosure is held within the *Ginnungagap*, which is the eternal void, akin to the magnetic abyss we detailed earlier. Let it be remembered always!

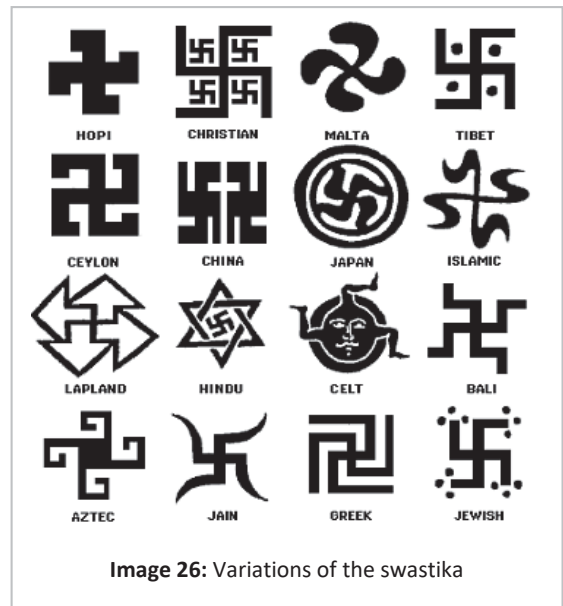

Image 25: Norse Cosmic World Tree

117. Listen to Reason! Again, like the Celts, the Nordic Universe is divided into three parts: **Asgard** (the heavens, or realm of the gods), **Midgard** (the earth) and **Helleim** (the underworld). Each of the three parts in the Norse model of the world tree have their sub-

parts, totalling 9 regions in total. Both the Celtics and the Nordics believe that there is a tube of light that runs through the centre of the tree from top to bottom, connecting all three worlds, called the bifrost bridge. The tube of light is also connected to the pole star, around which the universe above of stars and galaxies rotate. Let it be known, that this is alluding to the **axis mundi** or **cosmic vortex**. Let it be remembered always!

Consensus and Summary

118. Listen to Reason! The biblical narrative of the creation story of Genesis, (like the Vedic, Celtic and Nordic texts), describes the garden of Eden as having a tree in its centre and that the garden is divided by four rivers: the Gihon, the Pishon, the Tigris and the Euphrates. This description is seen to be consistent in all the cosmic egg creation literature we have looked at within this book. For instance, in the Vedic texts, the four islands described are divided by four rivers flowing out from the centre. The *swastika*

is also symbolic of this reality. The maps of images 11 and 12 shown earlier clearly show this reality of earth's central axis having four rivers flowing outward from the centre. Let it be remembered always!

119. Listen to Reason! The biblical narrative also describes the act of god separating the waters (firmaments) above from the waters below. Gen ch.1 v.4 also describes the stars as being held within the firmaments high above the earth. There is no alluding to stars being millions or billions of light years away. They are simply luminaries that are either placed in, or projected onto, the firmaments above. The image herein this section shows the Hebraic depiction of the Hebrew's long-held cosmology. Let it be remembered always!

120. Listen to Reason! In ancient folklore writings on the cosmology of our heavens, there is a difference between the stars that are in fixed positions and the stars that appear to be moving in all sorts of different motions. These non-stationary stars, better yet luminaries, are called wondering stars by the ancients. These wondering stars are what today's scientists call our local planets; Mercury, Venus, Mars, Saturn, Jupiter etc. Therefore, the bodies that make up our solar system, albeit a system of luminaries that hovers and rotates

above our flat plane *earth*, are the suns and moons of the four realms as described earlier. Let it be remembered always!

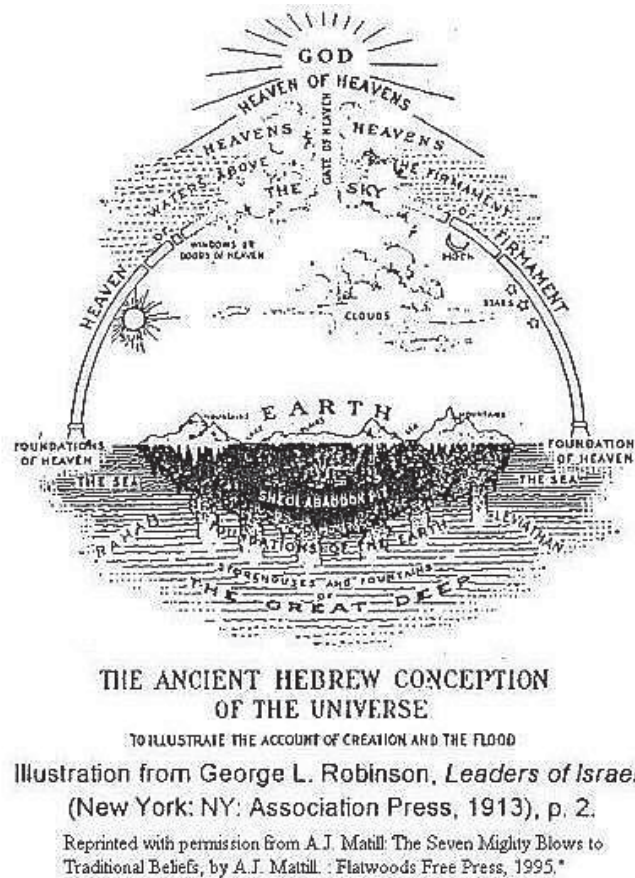

Image 27: Hebraic Conception of the Universe.

121. Listen to Reason! There are many other groups that have in their creation narratives very similar concepts to what this writer is trying convey and make clear – groups such as: The **Finnish** people (of Finland), The **Zuni** people (of New Mexico), the **Kogi** people (of Columbia), The **Assyrian** people (of Assyria), The **Japanese** people (of Japan), the **Akan** people (of Ghana), the **Fon** people (of Benin), the **Igbo** and **Yoruba** people (of Nigeria) and many others around the world. This writer invites the readers (and listeners) to do their own research and they will find exactly what this writer and indeed the people of those groups are elaborating on, in this book. And that is, our universe exists as a flat plane, floating on vast oceanic salt waters inside a cosmic egg with a symbolic tree of life at the centre, with the suns, moons, stars and galaxies circling above in the sky. Let it be remembered always!

122. Listen to Reason! The word **planet** is a misnomer. We live on a **plane**, not a planet. In fact, there is no such thing as a planet. They are all luminaries, lights in the skies; the vast

majority in fixed rotatory positions and a small number that are not, called wondering stars (Mercury, Venus, Mars, Saturn, Jupiter etc). Let it be remembered always!

123. Listen to Reason! All the named cosmologies in this part tell us that all life began at the centre of the earth. Not Africa. The out of Africa narrative is a relatively recent concept designed to deliberately steer truth-seekers away from the truth. That narrative came about as one of the protocols of Zion; misinformation. The Dogon of today, although they still tell us that they originated from the Sirius Star system, this writer understands what they actually mean. From their point of view, the Sirius star system directs them to the centre of the universe which is directly above the North Pole. In the same way, when NASA say they are planning on going to Mars (for instance), they are not talking about the literal luminary. They are alluding to outer districts of earth plane of which Mars is the sun, and Venus the moon. These outer districts have seas, oceans, lands and mountain ranges just as we do here in Atlantis. But the point being made here is that the Dogons know that they came originally from lands in the North Pole of which Sirius circles around. Let it be remembered always!

124. Listen to Reason! The big bang theory was first postulated by Georges Lemaître in 1927. He described the universe as being created from a massive explosion from a singularity, or single atom, which he called the primeval cosmic egg, containing all the blueprints, so to speak, for life. Let it be remembered always!

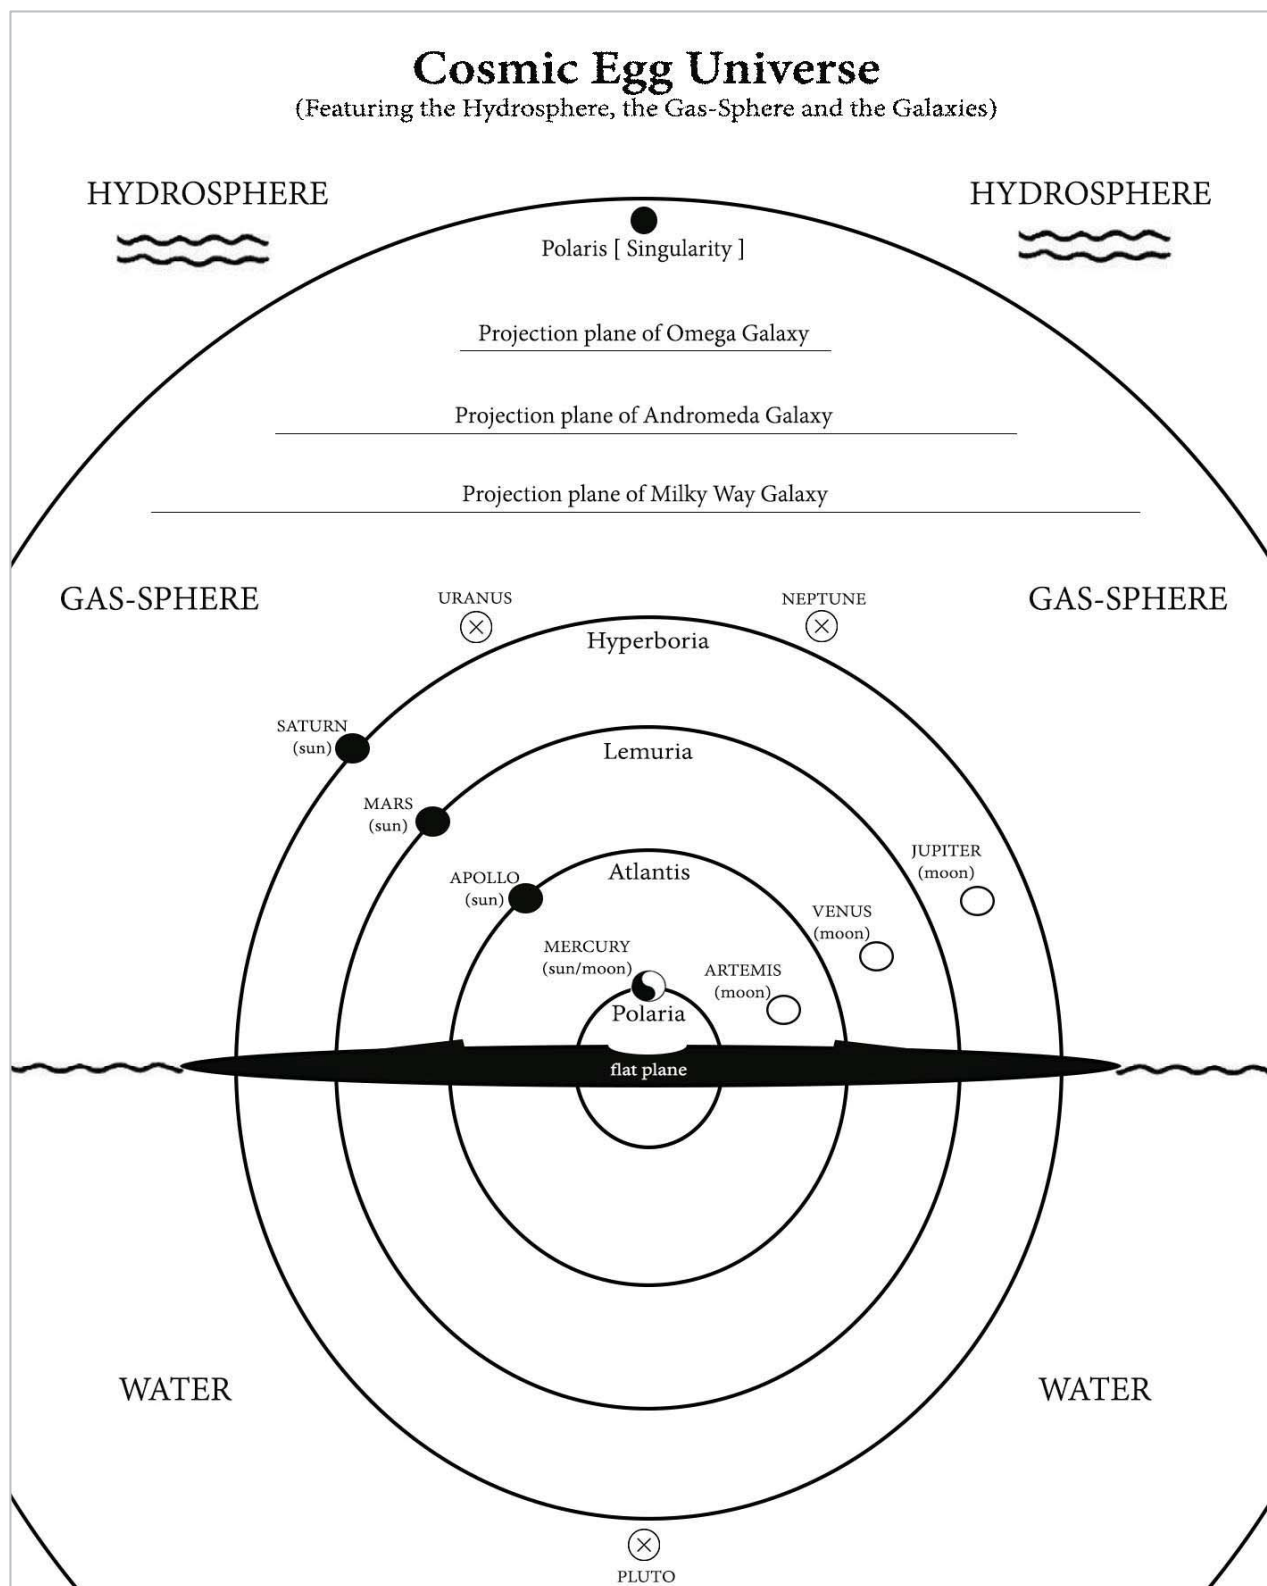

Diagram 9: Cosmic Egg Universe – featuring the Hydrosphere, the Gas-Sphere and the Galaxies.

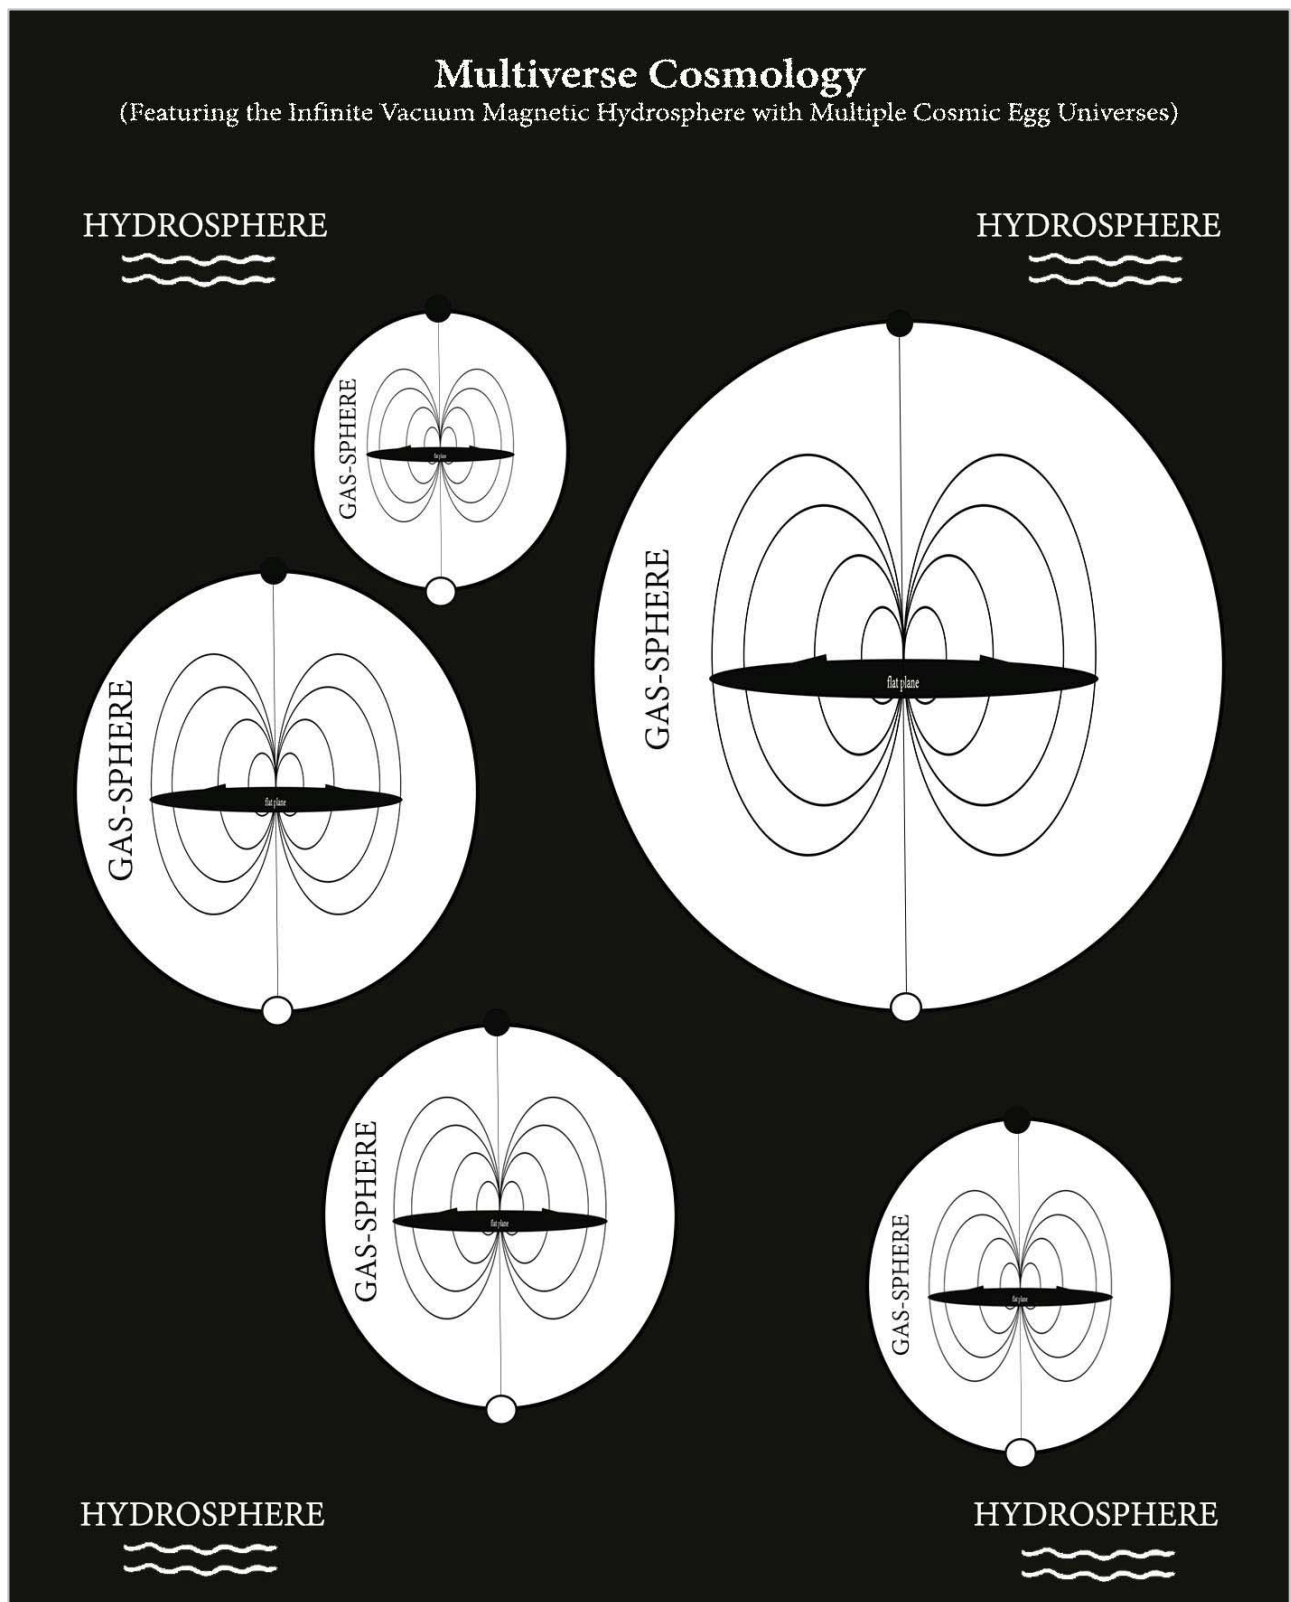

Diagram 10: Depiction of the Multiverse, showing the Infinite Magnetic Hydrosphere Vacuum with multiple Electromagnetic Cosmic Egg Universes inside.

PART THREE – Plank State Universe

The Nature of the Holographic Universe

The Discontinuity of Time

125. Listen to Reason! The books: 1) Legacy of the Black Gods in Time before time, and 2) The journey of pa-tempta, by Paul Simons, were stepping stones in the journey of this writer Nebu Ka Ma'at. Absolute-Nature Supreme-Being is forever existing, growing, learning, experiencing and expanding, and so should we as individuated beings. The concept of time is paradoxical when relating to the Infinite-Consciousness of Absolute-Nature. Yet, in order to experience time, the Supreme-Being must alternately “remember and forget”, “remember and forget” that it is indeed infinitely conscious. Each time the Supreme-Being forgets that it is infinitely conscious, it immediately triangulates a position within Space and in so doing a spark occurs and a new universe is immediately created. It is as instant as that. Thus, the workings of Noots meltdown burst into action to produce Matter. As soon as Noots activity begins, the continuity of Time begins. Prior to that moment, and immediately after that moment, Infinite-Almighty-Eternal Absolute-Nature Supreme-Being is TIMELESS. Let it be remembered always!

“The illiterate of the 21st Century will not be those who cannot read or write, but those who cannot **learn, unlearn** and **return**”.

— Alvin Toffler, Futurist

126. Listen to Reason! There are countless universes in existence. Yet, the number of universes is not infinite. Universes are constantly being created, grown, sustained and then decay, by way of the cycles and seasons, laws and principles of Absolute-Nature. To picture this mentally; imagine a black board with multiple lights on its surface, like a polka-dot pattern. The lights turn on and off literally like twinkling stars. This is literally what is

happening from the point of view of the Supreme-Being, not forgetting how the ITNON describes the Creator. The twinkling of the lights is the act of the Supreme-Being creating and un-creating universes as it alternately “remembers and forgets”, “remembers and forgets” that it is infinitely conscious. This writer asserts that universe numbers are not infinite, simply because there is indeed an ever changing number of universes in existence at any given moment of plank time. Remember, a Planck time unit is the time required for light to travel a distance of 1 Planck length in a vacuum, which is a time interval of approximately 5.39×10^{-44} s. So, from the point of view of the Creator (i.e., the workings of Brain-Noots, Reason and Spirit-Beings) this is the time it takes for a universe to be created and un-created. Therefore, one plank unit is the ‘speed of thought’ of the Supreme-Being. But from the perspective of human beings the creation, growth, sustaining and eventual decay of our particular universe can take millions of years. However, Absolute-Nature in its life cycle of universe order is a period of 5,760,000,000 (Five Billion, Seven Hundred and Sixty Million) human years. Let it be remembered always!

Image 28: Simulation of Universes existing within the Magnetic Vacuum of Infinite-Consciousness

127. Listen to Reason! The writer reminds the reader and listener that there is a difference between Supreme-Being and Creator. The Supreme-Being = Infinite-SPACE, Almighty-MATTER, Eternal-TIME = Absolute-Nature. Whereas, the Creator within and part of the Supreme-Being are the workings of Brain-Noots, Reason and Spirit-Beings – each time the Supreme-Being chooses to forget itself for a plank unit of time. Check? Let it be remembered always!

128. Listen to Reason! How do we as human beings return to Source and discontinue our experience of time? The quick answer is simple. We would have to experience death. But the longer and more intelligible answer is as follows. First of all, what is Source-Energy and what is Source-Reality? The Source of our specific universe is the central axis mundi of our universe, which is located at the North Pole. The Black Sun at the centre of the North Pole

is the point of singularity where the original plank thought took place. The original plank thought is the original spark made by the Supreme-Being with the help of the Creative-Force; which is another way of saying the Creator (i.e., Brain-Noots, Reason and Spirit-Beings). With this originating thought, a spark took place at the point of singularity which is known scientifically as a nebula. In our local cosmic egg universe, this point of singularity (nebula) is the Black Sun at the centre of our universe; the North Pole. Thusly, Source-Energy and Source-Reality is located at the North Pole. Clearly, this is by far more accessible than what modern esoteric thought had been leading people to believe. Therefore, one can, having the right resources and right guidance by the laws of nature and correct paths prescribed by nature, make his/her journey to the North Pole in order to witness and experience Source-Reality, personally. However, there was a separation. A duality. The second part is the North Star, Polaris. And a cosmic gateway exists connecting the two points of the one singularity. Let it be remembered always!

129. Listen to Reason! The journey toward Source, indeed, does not have to be a physical one. The journey can also be witnessed and experienced mentally and spiritually. But for the sake of slowly and gradually making the journey, physically, let us consider what it might be like in the context of the discontinuity of time. The closer one gets to the centre of our universe, is the more the experience of time would begin to collapse and be discontinued. In fact, our entire experience of reality would begin to collapse around us. It would be akin to sleep walking. Like, gradually falling into a dreamtime state the closer we get to the black hole. Remaining conscious, we begin to experience darkness. We begin to experience a level of darkness beyond any formal description¹⁹. Humans of today do not understand what true darkness is. Our life-time spent within creation is one of light, sound and fury. We experience shadow, yes, or, avoidance of light. But never true darkness. The closest we get to true darkness is during rapid eye movement (REM) sleep, which is still only a step toward true darkness. Let it be remembered always!

130. Listen to Reason! In part two of this book we talked about the four lands of the crater continent at the North Pole (*Shamballa*). Should humans of the current Atlantean realm/ring district attempt to literally physically enter the said continent, it would be a near physically impossible feat in our current physical state. What does this writer mean by this? The Polarian Realm is a different dimension to the Atlantean Realm. Everything is different;

¹⁹ These descriptions of the journey toward the North Pole as elaborated upon here, were originally expressed by Brother Sanchez in his talk: Goddess Amma & The Dogon's Cosmic Egg PLUS Supreme Mathematics.

the atmosphere, the temperature, the air, even the speed of thought would be different. The conditions of space, matter and time is very different there. Thus, we would begin to lose our cohesive connection to the Atlantean Realm and its relative conditions of space, matter and time, but we would fail to connect with the Polarian Realm accordingly unless we know how to retune our Merkaba field. Put another way, we would have to change our frequency *angles* and become *angels*. Our Merkaba field is our collective torus fields working in complete harmony. Most humans of today have incorrectly working Merkaba fields. In other words, our multiple torus fields (correspondingly: our multiple chakra fields) are mostly out of sync. Thus, our personal collective Merkaba vehicle is out of tune; even within our current dimension, let alone stepping into another. We experience stress, pain, emotional turmoil, dis-eases and so forth due to our bodies *being* out of balance. So, in order for such a journey to be a successful one, the individual would have to literally spend a lifetime fine-tuning their *being* physically, mentally, emotionally, spiritually and also culturally and economically. It is all connected. Let it be remembered always!

131. Listen to Reason! The Creator or Creative-Force is forever experiencing true darkness, also called **triple darkness**. Brain-Noots can only operate and meltdown inside of triple darkness; hence they meltdown inside of the infinitude of black holes, before appearing into matter as sine-waves (light), brains, matter, the elements and so on. Reason, which is active mental contemplation, also operates in triple darkness. And Spirit-Beings, too, operate in triple darkness. The three, operate within the overlapping intersection of Space, Matter and Time. This is the quantum reality of triple darkness. In order for a human being to begin learning to experience darkness at the most basic level and remain alive physically, he/she would have to learn how to work with and interact with the Creator/Creative-Force. Did you get that? Read it again. *In order for a human being to experience darkness and remain alive physically, he/she would have to learn how to work with and interact with the Creator/Creative-Force.* This is what true meditation and contemplation is about. Connecting with the Creator intimately. It is a contemplative journey made within, not without. Let it be remembered always!

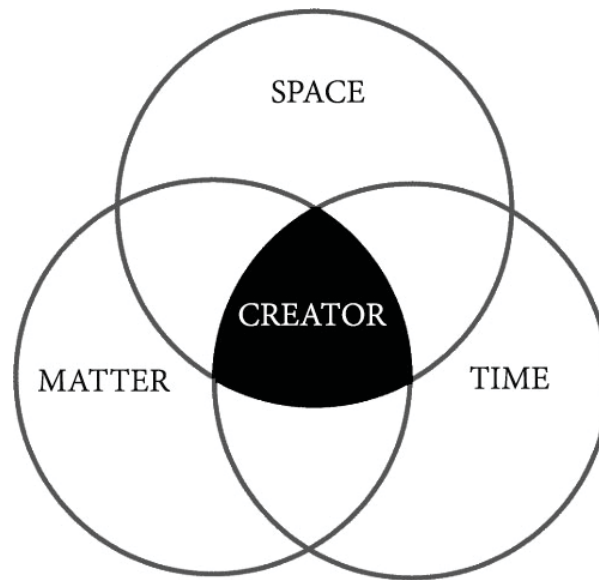

Diagram 11: The triple-darkness intersection of Space, Matter and Time where the Creative Forces operate.

132. Listen to Reason! The journey toward Source-Reality is like tracing the roots of a giant tree to find the actual tree stump where that long root was originated. Another way of looking at this journey toward Source, is like trailing backwards over the ripple effect of an *echo* to triangulate where exactly the original word that is being *echoed* came from. Let it be remembered always!

In the Beginning was the Word

133. Listen to Reason! In the beginning was the word. Let us call this word Aum. According to the Buddhist, the tone of Aum is a result of the collective echoed tones of the Creator of our own universe. Universes exist within the vacuum of Infinite-Consciousness, the magnetic sea of infinite potential. The intersecting and overlapping of the three great existences of Space, Matter and Time is where the origination Brain-Noots Gods and Goddesses Spirit-Beings live and operate (see diagram 11 above). These beings operate automatically and naturally when certain conditions are right for universe creation and growth. In other words, when the right Tone is being emitted by the Supreme-Being from a given location, Brain-Noots Gods and Goddesses automatically and spontaneously spring into action and proceed with helping other active Noots to meltdown to produce brain-cores of nebulas. Thus, creating and spawning new torus fields of gas-spheres, within which flat planes are created as a ripple effect of the Creator's echo, Aum. Let it be remembered always!

134. Listen to Reason! In the beginning was the word, and so shall it be in the end. This is why we talked about what it might be like to take a journey back toward the point of singularity. When talking about the idea of “flat earth” (which is better to be described as a flat plane, and not a planet), the most obvious question that mundane people ask is: if we sail far out to sea wont we fall off the edge? But the real question is: what does the word edge mean, etymologically speaking? The word edge has the same root as the word egg; and this is no co-incidence. The root of both words is the Old Norse word *eggja* meaning to *sharpen*, to *incite* or to *egg-on*. So, a journey to the edge of the world, is a journey to the egg of the world – regardless of which direction from the centre outward. But the journey within, toward the centre, is a journey toward the Creator. Once you arrive back at the beginning which is also the ending of the world, or world egg, or world edge, you arrive at the Original Tone that created the echo. Now you are One with the Creator. As stated before, this can be a literal physical journey; but can also be experienced mentally and spiritually without arriving there physically. Let it be remembered always!

135. Listen to Reason! Many people have made this journey in the past. These journeys have been made physically, mentally and spiritually. Either way, the right guidance is absolutely necessary. We know these journeys have been taken by virtue of the multiple mythological stories that we have studied herein. What is a myth? A myth is: *a traditional story, especially one concerning the early history of a people or explaining a natural or social phenomenon, and typically involving supernatural beings or events*. This is Google’s interpretation. However, we now know from our studies that tens of cultural narratives in remote parts of the world are telling the exact same stories; only varied in languages, times, names of people and deities, and so forth. There is a plethora of evidence available today of the existence of a central axis to our universe’s creation, located at the North Pole. Let it be remembered always!

136. Listen to Reason! The beginning and the ending of our universe is literally happening at the same time, when viewed in the context of plank units of time. Our perspective of time is the subjective rate of which we mentally change our perspective or worldview, which generates the physical experience we have of time. Plank State Universe, however, is the fundamental reality of what the universe is and isn’t at the same time. Thus, the Plank State of the Universe is that it is holographic in nature where all events of persons, places and things are happening simultaneously. The location of “Plank State Universe” is within the axis mundi or black hole nebula of said universe. In our case, the North Pole. Within the

plank state of the black hole, or Black Sun, anything is possible. Literally. Every person, place and thing exists as a possibility within Plank State Universe. The ripple effect from there-outward has to do with our own internal thoughts, ideas, feelings, emotions etc. We quite literally create, echo and manifest exactly what we think, believe and feel to be possible. This is how Source-Energy at Source-Reality works. For most people, these acts are subconscious. People subconsciously manifest what they believe to be true. Or, better yet, people manifest what they program their subconscious minds with. There is no outsider to blame, in reality. And there is no outside. It all happens within... within the dark matter of our being. At the deepest level, we are the Creator and the Creator is us. We are ultimately the Creator of this reality. Let it be remembered always!

137. Listen to Reason! Prior to physical manifestation, each and every one of us existed as conscious entities in one formula of ether or another. The three main formulas of etheric beings are scientifically called nine-ether, six-ether and three-ether. Respectively these are creative ether, destructive ether and ghostation of ether, beings. Etheric beings, in Noone Nature Science Philosophy are conscious and conscientious gases in nature, that exist within the gas-sphere of universes – as organisers, programmers and controllers of persons, places and things. They also inspire and reveal information to humans. These etheric beings are created by brain-concentration and are spawned from the brain-core of the nebula or Black Sun. Beyond the gas-sphere of all universes is the hydrosphere where higher conscious entities called Brain-Noots Gods and Goddesses exist. Let it be remembered always!

138. Listen to Reason! In the general day to day life of humans, what people call time is just an experience of continuity, regardless of how our minds constantly changes its perspective of the physical plane. Time is also measured as the association between ‘what has happened’ with ‘what might happen’. In other words, time is only relative to past and future, but not NOW. Whereas NOW, is Quantum Reality, or the Quantum Presence of Source-Reality where anything is possible and probable. Human beings are caught up with allowing their past and future to define their present, and withstanding their own inner being to complete all past activities, define their present and blueprint a future accordingly. The mental oscillation between ‘what has happened’ with ‘what might happen’ is not a tangible physical experience. It is only mental. Yet, emotionally, the experience appears to be real even though it has not manifested as yet; and may never. The experience that we are having in now-time is simply a reflection and reflexion of the rapid oscillation between the past and probably futures. It is like an automatic assessment of a probable reality. There

is the personal now-time experience and there is the humanity-collective now-time experience of the universe. The principle is the same. Humanity as a whole is experiencing a probable worldview based on our collective rapid oscillation between epistemic pasts and probable futures. Humanity as a whole, however, is the one-creator of this reality. Each and every one of us can trace our own ripple effect right back to the nebula from which we came; the Black Sun at the North Pole. We are all connected as one complete single experience there. One being. The one, is differentiated in the countless ripples of consciousness that echoed and embodies all lifeforms including humans and other animals, birds, fishes and so on. The ancients knew these truths and thus they always involve the Creator as part of their cosmology. They sometimes expressed the Creator in an anthropomorphic manner, having human characteristics. And why wouldn't they? Are we not created in the image and likeness of the Creator? Indeed. Thus, we are the physical posterity of the projected humanoid ideas of Brain-Noots Gods and Goddesses who organised, programmed and controlled Noots meltdown into matter thus growing and producing this realm (and all its components and lifeforms) as imagined. Let it be remembered always!

139. Listen to Reason! For some people, it may be difficult to see how their own mental oscillations changes their view of reality. This is because it happens moment to moment on a sub conscious level. They would have to practice a process of observation over a long period of time to notice actual change of their worldview. This is why, when some individuals engage in psychedelic plants (like *psilocybe mushrooms*, *peyote* or *ayahuasca*) they immediately notice a radical change and expansion in their perception of reality. The change is experienced almost instantly, and for most it stays that way moving forward, until the next quantum leap so to speak. Let it be remembered always!

140. Listen to Reason! Consciousness itself, does not have a concept of time. Nor does it have concepts of human experience. So, consciousness differentiates itself into human experience in order to experience its own creation. Thus, Creator and the created are one and the same. The universe, in this context, is self-created. Using Brain-Noots and mind energy Reason, Spirit-Beings are differentiated into the image and likeness of their own imaginations. And here we are. Small fragments of a larger being. When this writer looks at another human being, he is looking at one of billions of shattered reflections of himself. Similar to that of a reflection in a mirror. When we look into the mirror we see a full reflection of ourselves. If we smashed the mirror, we see a ripple effect of cracks. Every

crack is unique and holds a different view of the same reflected being. Check? Let it be remembered always!

141. Listen to Reason! The purpose of looking at plank state phenomena in these sections is about coming to the realisation that what we make of the universe conceptually, is exactly what is presented to us in our space/time experience; but, is not necessarily what the universe actually is. For instance, the way in which we interpret a tree is based on the relationship between our own past collective-experience of trees in general and what we project trees to probably be in the future. And although we have a conscious experience of the tree in the moment, the experience itself has no bearing or effect on the tree in its naturally occurring plank state. Consciousness, therefore, is experiencing reality change as an experience of time. Let it be remembered always!

142. Listen to Reason! In the beginning was the word, and the word became flesh. The 'word' is synonymous with 'intent' and also 'sound' or 'vibration'. Sound is our primary means of communication; and words make up the language construct of our communication. When we convert our intents into words and sounds we literally create a plank state phenomenon. Then, the vibratory ripple effect begins at the exact moment. We are reminded to be careful of what we think, or say, as it may come true. Our intents, as in, the basis of our thoughts, also has the same effect. We do not have to utter words vocally, for a thought to have a ripple effect that can affect our universe experience, and that of others in our environment. Thus, we must always be mindful of our thoughts, not just what we say. "As a man thinks, so shall it be". Every thought that we project continues as a ripple throughout our cosmos, to the extent of our torus field. Even if we follow-up a *mistake* thought by sending a *correcting* thought, it does not automatically cancel the first. Both vibrations of thoughts are rippled out into the cosmos to be picked up by others subconsciously. Thus, thoughts, indeed have massive effects on the shaping of our environment and our world. Indeed, Spirit-Beings inspire and reveal by way of thoughts. Most of our thoughts are influenced by the inspirations and revelations of Spirit-Beings either positively or negatively. Let it be remembered always!

143. Listen to Reason! The point being made here is this. We know that we must be mindful of our thoughts. But we must also be reminded that thinking is an automatic process that is primarily influenced by Spirit-Beings (with positive or negative intent). Ask yourself this. Do human beings think? Or, does thinking happen automatically? When a thought enters your awareness, who is the observer of the thought? Can a thought observe another thought?

No! only the Source Reality of your being can do that. So, when we say be mindful of our thoughts and intents, we are simultaneously acknowledging that the thoughts and intents are primarily influenced from outside. Hence the saying: “*when a thought enters my mind*”. From the inside however, we have reasoning capacity; the ability to discern whether a thought that entered the mind sphere may have a positive or negative potential impact on our proceeding experience. Let it be remembered always!

Information Storage and Disposition of Time

144. Listen to Reason! Absolute-Nature is genius when it comes to storing information about itself. The nature of the Supreme-Being is holographic in terms of what it projects as a universe... with all its persons, places and things; past, present and future; with infinite possibilities. Itzhak Bentov in his work *Stalking the Wild Pendulum – On the Mechanics of Consciousness*, explains this holographic process paraphrased as follows:

- a. Now let us go one step beyond and see whether “sound” can also be used for storing information or knowledge.
- b. A shallow round pan and three pebbles are all we need for this experiment. Fill the pan with water.
- c. Now drop in the three pebbles simultaneously, and watch the ripples spread in the pan. Each pebble is the source of waves spreading evenly across the pan. (Let us neglect the wavelets reflected back from the walls of the pan). These waves cross each other and create quite a complex pattern of wavelets on the surface of the water. They look pretty chaotic to us. There is, however, an order in this apparent chaos. All that has happened is that the wave produced by each individual pebble expanded and reached the edge of the pan. In so doing, the waves have crossed and interacted with each other on the way to the edges of the pan. This interaction²⁰ created a complex pattern that is called an interference pattern. If we carefully analyze this pattern, however, we can trace back each wavelet to its source, the pebble.
- d. Let us now quick-freeze the surface of the water in the pan and lift out the resulting rippled sheet of ice. We are holding in our hands a record of the interference pattern of waves, or we may even call it a hologram²¹.

²⁰ Superposition is included in the broader term ok “interaction” - Itzhak Bentov

²¹ A hologram is usually a flat photographic film on which information is recorded about the shape of the object in the form of a wave-front interference pattern. When this film is illuminated with the same light under which the

- e. We shall find to our great surprise that we can see the three pebbles suspended in mid-air if we look through the ice toward the light. They will look very three-dimensional to us. This is a totally unexpected result. It seems that the rippled surface of the ice, or the interference pattern, has somehow *stored the information* about the whereabouts and the shape of the pebbles.
- f. The ice surface acted as a distorted lens in such a way as to focus the light to points taken up by the pebbles that have caused all these ripples. The chaotic-looking ice surface is actually an information-storage device, a hologram.

145. Listen to Reason! This writer would not recommend that the reader and listener actually try to perform the experiment just described. It will not work in practice for certain complicated technical reasons, which we shall bypass. But it is perfectly useful for the purpose of explaining the workings of Absolute-Nature with its collective-information processor, the hologram. It is Absolute-Nature's way of storing information. There is already scientific evidence that shows that our brains store information in holographic form. As above so below. Let it be remembered always!

146. Listen to Reason! As emphasised several times already, time (disposition) is the experience of observing changes in reality; or, observing different points of view of the holographic universe. The word disposition has two primary meanings: 1) the way in which something is placed or arranged, especially in relation to other things, and 2) a person's inherent qualities of mind and character. Both are reasonable in relation to understanding what *time* is, and also understanding the disposition of *time* in a holographic universe. This writer has spent much time, discussing *time*. Because, *time*, is our biggest downfall when it comes to experiencing Source Reality. When we engage in *time*, we immediately affect our inherent qualities of mind and character. When we engage in *time*, we also affect the way in which we view the universe. Thus, *time*, affects us internally and also what appears to be external. Still, *time* is not our enemy. *Time* (including *Space* and *Matter*) is necessary in order that we might experience both our created self and the created reality of our universe. But to have an experience of NOW, or Quantum Presence, one must learn to collapse *time* and remain conscious in that experience. Let it be remembered always!

information was originally recorded, the wave front is reconstructed, and the image appears in space as a three-dimensional object, identical in "shape" to the original object. See Kock, Winston E., *Lasers and Holography*. New York: Doubleday-Anchor, 1969; London: Heinemann Education. 1972.

Movement of the Luminaries and the Paths of Consciousness

147. Listen to Reason! As we have expressed several times, what scientists have come to call the planets of our solar system, are actually luminaries playing the role of suns and moons of the various districts of our Bhu-Mandala Terraferma *earth*. Our earth is a pyramid shaped Bhu-Mandala with four concentric ringed-districts or realms; the Polarian, Atlantean, Lemurian and Hyperborean Realms. Each district/realm is separated by concentric mountain ranges covered by ice, such as the Arctic and Antarctic ice walls that encloses our realm, Atlantis. Each realm is housed within its own torus field, or CMB (Cosmic Microwave Background) radiation field. Let it be remembered always!

148. Listen to Reason! The movement of the suns and moons determines how we have and experience our four seasons, our days, nights and also weather conditions. The suns are situated within their torus field ranges and moves in a spiral motion up to the top and back down to the bottom and repeats indefinitely. As our sun Apollo moves at approximately 1000 miles per hour upward in a spiral motion, it is also moving inward as the torus field shape reduces in diameter toward the top. And likewise as the sun moves downwards in spiral motion, it is also moving outward toward the equator as the torus field shape increases in diameter. The moon on the other hand, takes a far less dramatic course as it circles within the skies of the torus field. The moon also moves up and down as it spirals. The combined movements of sun and moon give rise to the seasons that we experience annually. Let it be remembered always!

149. Listen to Reason! Just as a reminder, Mercury is an androgynous (sun/moon) luminary that serves the central district known as Polaria, also known as Shamballa or the Garden of Eden. Apollo (our sun) and Artemis (our moon) serves the second ringed-district known as Atlantis, also known as Geb (Khemet) or Midgard (Nordic). Mars and Venus are luminaries that serves as the sun and moon of the third ringed-district known as Lemuria. And the final ringed-district Hyperborea is served by the luminaries Saturn and Jupiter, the sun and moon respectively. Let it be remembered always!

150. Listen to Reason! The sun and moon luminaries of all four realms spiral up, down and around their respective torus fields in a manner as described earlier. Therefore, each realm has its own range of seasons, days and nights, weather etc.; similar to ours, but very different in degree, angle and dimension. The luminaries known as Uranus, Neptune and Pluto operate outside the four torus fields but still within the Gas-Sphere of the cosmic egg. They serve different functions to that of the other luminaries. Mundane scientists refer to

the them as exo-planets. They, along with the star constellations and galaxies above the firmaments, play their role in the balancing of the energies and spirit-forms within and of the Gas-Sphere (diagram 9). Whilst Uranus and Neptune serves the upper world, Pluto serves the underworld. Let it be remembered always!

	Vedic	Khemet	Nordic	Greek
Polaris (North Star)	Brahmaloka	Amun	Odin (Asgard)	Zeus
Cosmic highway	Ananta-Sesha (axis mundi)	Horus	Bifrost bridge	Iris
Neptune	Transcendental realms			
Uranus				
Saturn (sun)	Shani	Ausar	Woden	Chronos
Jupiter (moon)	Guru	Auset	Frigg	Zeus
Mars (sun)	Mangala	Her Deshur	Tier	Aries
Venus (moon)	Shukra	Sekhmet	Freya	Aphrodite
Apollo (sun)	Surya	Ra / Re	Suna	Apollo
Artemis (moon)	Chandra	Khonsu	Money	Artemis
Mercury (sun/moon)	Bodha	Tehuti	Hermod	Hermes
Earth (flat plane)	Bhu-Mandala	Geb	(Midgard)	Gaia
Pluto	Shiva	Anup	Loki (Helleim)	Hades

Table 2: Comparison table of the luminaries.

151. Listen to Reason! The journey of consciousness takes a very specific path in order of the luminaries. Consciousness is central and pivotal to the point of singularity – Polaris, the North Star aka Brahmaloka, Amun etc. This entity holds the highest level of consciousness within our cosmic egg universe; yet, not 100% conscious, but close. The journey of consciousness takes a path as follows: individuated Spirit-Beings are created through brain concentration of Polaris and drops of consciousness are gifted to them. They enter into the Divine Realm of the Omega Galaxy and are considered fallen angels. The term fallen does not mean bad. It simply means they are lesser in consciousness than Polaris, their Source.

The next Divine Realm of manifestation is the Andromeda Galaxy. As some of the created Spirit-Beings descend into the Realm of Neptune, they differentiate portions of their consciousness into lesser Spirit-Beings produced by brain concentration of the luminary Neptune. Remember, all luminaries are energy beings that have a kind of nebula brain core of Brain-Noots in meltdown process. Next, is manifestation into the Divine Realm of the Milky Way Galaxy in the Realm of Uranus. Similarly, a portion of the Spirit-Beings of Andromeda differentiate their consciousness into the Spirit-Beings produced by brain concentration of the luminary Uranus. Each lower level of manifestation results in lower levels of consciousness. Let it be remembered always!

152. Listen to Reason! Now, consciousness can enter into the inner layers of the torus fields, starting with the Sun Saturn. This is where the individual beings begin to experience time, so to speak. Within the cosmic egg realms, beings enter via the suns and leave via the moons. Like above, a portion of the Milky Way beings differentiate their consciousness into Spirit-Beings produced by brain concentration of the luminary Sun Saturn. The process continues via the luminary Suns Mars and Apollo, and finally the androgynous luminary Mercury. At this point, these conscious beings are ready to take physical form. The human beings of Polaria are grown by natural process, with the help of seed formulas, egg formulas and cell formulas... also transmitted via the Suns from Polaris all the way down to Mercury. The human beings are grown in eggs and produced right within the bowels of the earth near Mount Meru and are born onto one of the four islands of the Garden of Eden, aka Shamballa. Let it be remembered always!

153. Listen to Reason! It should be noted here, in preparation for the next section, that the descended beings came in special space-time vehicles called the Merkaba. It is the only vehicle that enables conscious beings to travel from one realm to another without losing consciousness. The Merkaba is another way of describing toroidal energy vehicles or etheric star ships. Often they are called angels descending. Meaning, beings that have the ability to tune their frequencies to the right angles thus enabling them to transcend and descend into different realms and dimensions. Let it be remembered always!

The Merkaba

154. Listen to Reason! Since you are reading this kind of book, then quite possibly you have heard many stories of avatars and of people who do astral projection or astral travelling. Although this writer has a reasonable scientific understanding of the above, the actual

experience of astral travelling is yet to be accomplished, admittedly. The same is true for the Merkaba. This writer has a scientific understanding of the Merkaba field, but the actual experience of activating the Merkaba is yet to happen. Thus, the instructions and guidance necessary to activate the Merkaba will not be covered within this work. The point of addressing the subject-matter is to express one of the many ways in which human beings can transcend the torus fields of our universe and experience the other Realms and their dimensions. Activating the Merkaba will be like tuning our light body to that of the frequency of the torus fields of earth plane. If both frequencies are in sync, then conscious travel through and beyond the torus fields will be much more of a probability. Now, there is a difference between astral projection and astral travel. Astral projection is literally consciously travelling to another location without taking the astral (light) body; whereas, astral travel is not just consciously travelling to another location, but doing so along with the astral (light) body. There are a lot of people who know how to astrally project their consciousness, but very few know how to activate the light body as a vehicle; hence, the Merkaba. Let it be remembered always!

155. Listen to Reason! An avatar, is quite the opposite from what was very briefly described above. An avatar is a human being that allows their body to be inhabited by other conscious beings (whether living or non-living). In some ancient folklore we hear of avatars that were used as a vehicle for inspiration and revelation of knowledge and information; and sometimes, used in ceremonies and healing rituals. Like everything else in Nature, avatars have their positive as well as their negative functions and purposes. Let it be remembered always!

156. Listen to Reason! The Merkaba is constructed on the same principle of the Universe. Merkaba meditation is a visualisation process, where the practitioner visualises two tetrahedron pyramids (one pointing upward and the other pointing downwards) superimposed and interlocking with each other. This is known as a Star tetrahedron (diagram 12). At the central point where the pyramids meet (image 29) is radiated a type of energy similar to that of the black hole in our cosmic egg universe central nebula. This energy is used for healing. It is also used as a way of communicating with Source, the Black Sun or Polaris. Remember, as above so below; and all is connected. Let it be remembered always!

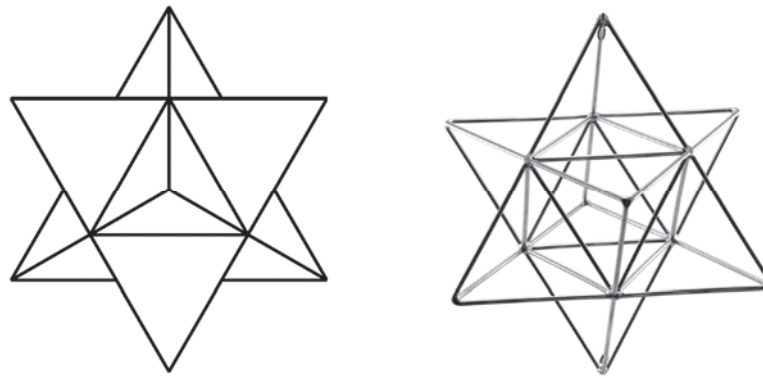

Diagram 12: Merkaba Star Tetrahedron

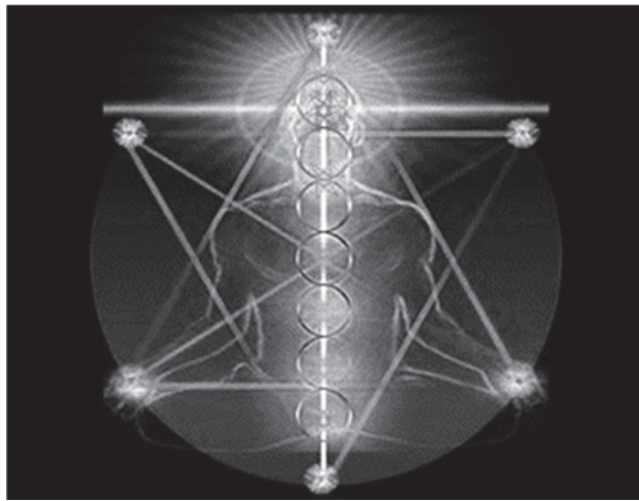

Image 29: Merkaba Star Tetrahedron and Light Body

157. Listen to Reason! Merkaba meditation is the same as Kundalini meditation. Well, they arrive at the same outcome; Merkaba activation, which is the same as torus field activation. The Merkaba meditation process activates the Star tetrahedron of the human body (see image 29 in this section), whereas the Kundalini meditation process activates the torus field of the human body (see diagram 3 in part one). As described in part one, the torus energy field is one that perpetuates and rejuvenates itself. It provides a constant source and flow of energy for life and healing. Historically, both Kundalini meditation and Merkaba meditation seems to have appeared around the same time – Kundalini in India and Merkaba in Egypt. The Vedas, speak of very tall beings that came from the centre of the earth to teach mankind how to survive during a time of planetary transformation. Similarly, the Egyptians speak of similar beings and called them nature-spirits or **Neteru**. Other cultures speak of these beings too. For instance, the Sumerians called them the **Anunnaki** and the Dogons called them the **Nommos**. These guides, were teaching humans how to tune-up

their light bodies to match the frequencies of our earth's torus fields, at a time of universal transformation from one era to another. So, in modern translations of Egyptian (or Khemetian) writings where recent books tell us that the *Neteru* came from Sirius, is a mistranslation or misunderstanding. Like the Dogons, the Khemetians also relate to Sirius as the home of the gods. But what they are actually alluding to, in the physical sense, are lands along our flat plane earth where the stars Sirius A and B, are circling above – not that they or their ancestors actually came from the stars! However, in the conscious sense, it can be reasoned that part of our consciousness came from the Sirius system as was described earlier. Let it be remembered always!

158. Listen to Reason! These teachings as mentioned above came around 6000 years ago, as earth plane was transitioning from the iron age (autumn cycle) to the bronze age (winter cycle). Usually at the cross-point of a transition, human beings tend to be well out of tune with the cycles and seasons of Absolute-Nature physically, mentally and spiritually. That, when these beings came forth to teach us how to re-align, so to speak, we literally called them Gods. Or, nature-spirits manifesting physically. Some of the teachers came in ships called *Shams* by the Sumerians. These *Shams* are Merkaba light-body torus-field energy-vehicles, which we all have the ability to create from the inside-out. But when we saw these crafts descending from the heavens, we called them *chariots of the gods*. Like the artefact shown in image 1 (part one), we also have a laser-etching (not a carving) of the Flower of Life found in the Temple of Osiris, in Abydos, Egypt. Let it be remembered always!

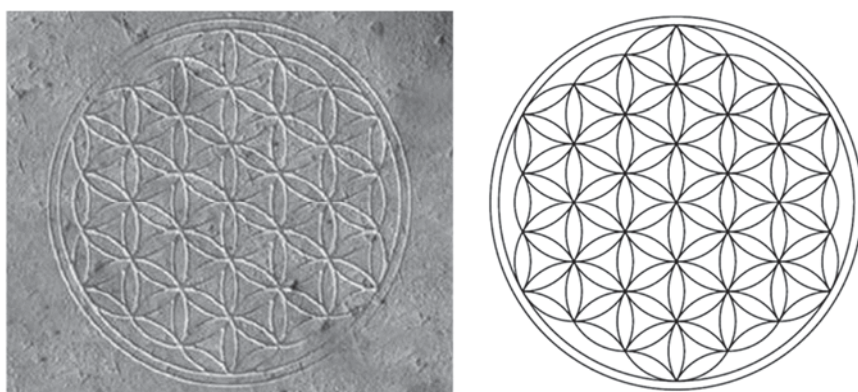

Image 30: Flower of Life

159. Listen to Reason! The flower of life is the symbol and blueprint of our Universe. Within this geometric figure is found all life patterns, including the Merkaba, egg-of-life, Fibonacci spiral and so on. Many cultures across the world use this image to symbolise creation and life. It is not exclusive to the Egyptians. The primary reason for anyone doing Kundalini or Merkaba meditation is to re-align with who they are. It is not as important as astral

travelling or contacting other dimensional beings. That ought to be the least of our interest right now. Aligning with our sovereignty and life-purpose is by far more important. Let it be remembered always!

160. Listen to Reason! The people of earth today are on many different paths; the two main paths being ascending-reason and descending-reason. For instance, the higher beings, as in those in control of government systems etc., are on a path of descent in morals, standards and abilities. They are in control of the masses due to their higher conscious perceptive awareness of reality, at this time. Their journey is literally from the centre, Polaria, into Atlantis and now they are bent on getting into the outer lands of Mars etc. Thus, they are on a path of descent. Meanwhile, there are those of us on the path of ascension, travelling inward from the outer realms toward the centre, toward Source Reality and ultimately back toward Polaris. These people are on a decline in morals, standards and abilities. As made clear in part two of this book, this writer has used the science of syncretism to amalgamate the information herein, into a context that details our flat plane cosmological and cosmic egg universe. It is down to the reader (and listener) now, to take their initiate further by investigating everything that is presented herein this book and must therefore arrive at their own consensus. You will be amazed at what you find. This small book is only the beginning. Let it be remembered always and let it be known!

End.

Nebu Ka Ma'at
